

LAPTOPS

PICKING YOUR GO-TO ON THE GO DEVICE

Manish Rajesh | manish@digit.in

When it comes to working, or entertainment on the go, there aren't many devices that can beat a good laptop. Sure laptops aren't as powerful or flexible as desktops, but with the many options you have nowadays, you can't go wrong. Well you can. We're here to help you get it right.

Laptops come in many sizes. Depending on your use case, you definitely want to consider the weight and size of the laptop you're getting yourself. If you're just going to use it at home, then you could go for one with a much larger screen that's heavier, but if you're going to be on the move a lot, you might want to consider a laptop with a slim form factor. Once you've decided on a size, you'll want

if you're in the market for a compact, all-rounder laptop.

Keys and touchpad are important when making your decision, are you going to extensively use the touchpad? If yes, then you want something that's precise, the Microsoft Surface Pro has a great, responsive and precise touchpad. When it comes to keys, unless you're going for a gaming laptop, don't bother with Cherry MX keys. Usually, laptop keys have very little travel, especially if you're getting a MacBook with Butterfly keys, which some of us find very annoying to type on.

It's important to look at the connectivity options in

the laptop you're getting and make sure it has all the ports you need. Are you going to connect the laptop to a monitor? Make sure it has an HDMI port or any other video port. Do you plan on connecting an ethernet cable to the laptop? Make sure it has the port. Do your research before picking the right laptop.

Next we look at hardware, what are you going

to use the laptop for? What's your budget? You have to decide accordingly what you're going to go for. If you're only going to use the laptop casually, for browsing and watching videos, you don't need too much in terms of specs, so you can afford to go for options with less RAM and weaker CPUs. If you're

in the market for a gaming laptop however, you want a good amount of RAM, a good processor, and a good GPU. The prices for good gaming laptops can go pretty high, but a reasonably priced one you can consider is the ASUS

ASUS TUF FX505DT

TUF Gaming FX505DT which has an Nvidia GTX 1650 in it and should more than suffice for your gaming needs at medium-high graphics in under ₹60K.

If you're planning to be on the go a lot with your laptop, battery life is an important consideration. Beefy laptops don't usually have high battery lives, if they do, they cost a premium. Laptops like the XPS 13 we mentioned above, feature decent battery-life.

Finally, you want to consider how much storage you're getting with your laptop. Is it enough for your needs? Is it too little, will you need to expand it yourself? Plenty of reasonably-priced laptop options come with decent storage options nowadays. But if you're skimping on price, you could possibly sacrifice on some storage space. 

DELL XPS 13

to look at the screen resolution, a lot of laptops today, even the ones with small screen sizes, have really good resolutions. Just take a look at the Dell XPS 13, which is just 13-inches. However, it features even 4K as an option! Speaking of which, the Dell XPS 13 is a great notebook option overall,
