WD My Passport GO SSD

The WD My Passport GO SSD is a compact portable SSD that will easily fit into your pockets. It also does away with the hassle of needing to deal with cables, because it comes with its own built-in cable that tucks into the case when you don't need it. However, we found the cable to be pretty short. It's fine if you're using the device with a laptop or something that's on a desk, however, if you happen to have a cabinet and you want to connect this SSD to the USB slots on the front, chances are, the SSD will be dangling off the wire. Fortunately, the SSD itself is very light, so we weren't that worried about the cable breaking or the SSD detaching from the port and falling.

In terms of looks, the SSD looks decent, nothing too fancy. The model we got was the Amber version, which has a yellow-ish border, with black in the middle. The body is plastic, with the border being a textured plastic that emulates rubber. It's grippy so the SSD shouldn't slip off smooth surfaces. It's also got a stripe groove design on both sides with the WD logo in the corner.

The write speeds on the WD My Passport Go SSD averaged between 100-200MB/s. Read speeds were at approximately 350-400MB/s, as advertised. Unfortunately, it was only the read speeds that were fast, for an SSD, the write speeds were pretty slow. We concluded that the controller was not optimal, as we increased the number of threads on the CrystalDisk benchmark, the Read and Write speeds began to suffer, dropping by almost 100MB/s at 16 threads.

At the ₹7,299 price point, there are better portable SSD options out there, that perform faster.

Luminox RECON NAV SPC 8831.KM

Smartwatches may be all the craze but that doesn't mean that good old analog watches are going out of fashion.

Especially the rugged and classy kind. The Luminox RECON NAV SPC 8831.KM is one such watch that's built for durability and adventure while still bearing a classy and rugged look. The NAV SPC here stands for navigation specialist. It's not just for adventure and hiking though, this is a military grade watch, with its carbon reinforced case, anti-reflective sapphire crystal glass, and water resistance up to 200m. 200m means you can go diving with this watch on without any issues. The carbon case has a nice-looking matte finish to it as well.

Moving on to the watch face, looking closely, you'll find that there's a scale on the watch which can be used to calculate your walking speed. The 8831.KM variant of the watch comes with values in km/h. You can set up to two time zones on the watch face, with the secondary

time zone only displaying in hours via a single hand. The date is also displayed on the watch face. The watch glows in the dark, with a backlight that'll glow for roughly 25 years, according to Luminox.

Other than that, there's a separate compass for the watch that sits separately from the watch face, and is slightly lower on the strap of the watch. This position can be completely adjusted or removed if wanted. The strap itself has a ruler on it which can be used to make measurements.

The Luminox RECON NAV SPC 8831.

KM is a good looking and durable watch that's targeted at military-professionals and hikers, outdoorsmen. In addition to being functional, it's also a very good looking and durable watch that can take punishment from tough environments and weather. However, it also comes with a price-tag to match.
