

Avaya CU360 collaboration unit

The purpose of the Avaya CU 360 is to be your all-in-one solution for video conferencing. Thanks to its mobility, you can turn just about any room into a video-conference ready room with the CU 360. Video conferencing on the go, if you will.

The CU 360 houses a 4K wide-angle lens and has 1080p video output. The system basically supports the ability to connect remote users and set-up near-instant video conferences. Avaya promises that it takes less than five minutes to set up a video conference with the

CU 360. Additionally, the system uses Android OS, so you don't even need a PC to get things started.

Once you've got the CU 360 running, setting up a conference is easy and it works well with most popular video conferencing solutions. It also supports cloud integration, as well as integration with Google Apps, Office 365, Dropbox and more.

Thanks to Bluetooth support, you can do away with cables entirely when setting up a conference room using the CU 360, and you don't need a mic, the CU 360 comes with an array of them.

SPECIFICATIONS

Bluetooth connectivity and HDMI connections | 24-language user interface | API for endpoint control | Microphone array | Embedded encryption | 1080p video resolution | 4K camera sensor | IPv4 and IPv6 simultaneous support |

PRICE: ₹71,000 approx

TicWatch Pro

Mobvoi or Ticwatch aren't exactly household names, with the Ticwatch being a relatively new line of smartwatches. It was only last year that the Ticwatch S and Ticwatch E came out, which were apparently pretty good. This year, the company has followed up with the Ticwatch Pro.

Mobvoi, the company behind Ticwatch, have moved on to smartwatches from creating AI for smart devices, such as wearables, headphones and more.

This translated to the Ticwatch Pro, which is the company's best and most premium smartwatch yet. Considering their previous smartwatch entries were budget entrants, this wasn't exactly a feat.

The Ticwatch Pro features a premium design, and comes with dual-screen tech, which boosts the watch's battery life to weeks, instead of a few days, which is common for Wear OS smartwatches. At ₹23,000, the watch is priced pretty reasonably, considering the specs and features it packs.

In addition to a more premium look and feel, the watch is also IP68 water resistant, and uses a leather and silicone strap design. It's not a very thick or bulky watch, but it is thicker than its predecessors. It has two buttons on the right side, which are on the 2 and 4 positions of the clock face. They're both the same size and have good tactile feedback on pressing them.

The top button is used to access the menu of apps on the watch and exit back to the watch face. The bottom button opens your most-used app, which is the Ticwatch Fitness app by default. This can be customised.

The display combines an OLED and LCD screen, hence, dual-screen. This is the standout feature of the Ticwatch Pro, that also gives it an edge when it comes to battery life.

The Ticwatch Pro runs on Wear OS software, which works with many Android Wear watches. Setting it up was easy, we simply needed to follow the instructions on the phone and the smartwatch, which at most times was simply accepting to move on to the next step.

The Ticwatch Pro isn't exactly designed for fitness, but it does provide the basic tracking features you'd expect from a premium smartwatch. So it has everything you need when it comes to tracking your basic workouts such as running, cycling, and swimming.

SPECIFICATIONS

Qualcomm Snapdragon Wear 2100 chipset | 512 RAM | 4GB storage |
