

Scanning the world with Lidar

Two professors at Colorado State University want to use Lidar to scan the entire surface area of Earth. <https://digit.in/nov19-77>

Thunberg namesake

A tiny beetle is being named 'Nelloptodes gretae' after 16-year-old climate activist, Greta Thunberg. <https://digit.in/nov19-78>

FEEDBACK FOR THE OCTOBER 2019 ISSUE

Send feedback to editor@digit.in | join us on telegram - t.me/digitgeek | or on discord - discord.gg/mYD8XVt

 Hello Robert, I was an old time subscriber of digit since it was called chip. I stopped because I was taking a break from reading anything due to neck pain and was instead working out and reducing weight. During the last few issues of my subscription, quite a few regulars had left the magazine and I thought you were leaving too, and moving to Australia or something.

After I renewed my subscription, I received my new issue on 10th October (my birthday), and after I read the first editorial, I turned the page and saw your photo and article there. I felt genuine happiness and positivity to see you still with Digit, because you were the soul and passion of digit when I was a previous subscriber. And I do fully remember your article on batteries and how they are not improving.

Please keep up the good work and I wish you and your family the best of health and happiness. (I see some of your vacation photos on my facebook).

—Sarosh

 Hi Sarosh, In so happy to hear that you've started reading again. Happy Birthday from all of us at Digit. And yes, I never left Digit, I only moved countries. I look forward to more feedback from you, as it is the oldest readers who know all about our journey

and offer a unique perspective when giving us feedback.

—Robert

 Hey there I am writing to you after a year now. The name's BANG! PRAJWAL BANG! Miss me? After reading digit for over a year now I stumbled upon the fact that you live in Australia, why is that? Do you work for Digit part time or something?

Secondly, I have suggestion: please include a versus page every month like the ones on your YouTube channel, smart TV vs Smart TV, smart phone vs smart phone laptops and what not because being a tech mag you should really have one comparison page but you only have it once and that too at the end of the year [the ZERO 1] and that's just unfair because every month there's a new product launched in every category.

Do the Companies that send you stuff allow you to do so? Because if it loses to another brand in a battle it might suffer declines in sales.

I think you are getting what I am talking about. Because the last time you had a comparison was between cycles! Seriously?

I have one last question, does the digit team buy products for testing?

I am presently in 12th. Can you give me a few tips so that one day I can

become an editor @ DIGIT # (the best mag in the world).

—Prajwal Bang

 Hi Prajwal, That's a long letter, so I'll answer questions one at a time in a bulleted list.

- I have worked for Digit since January 2003, and I migrated to Australia with my family in 2015. I continue to work full time for Digit because it is my passion, and if possible, I would never want to work anywhere else. It's not just the magazine, but the company as a whole that is filled with passionate people who love everything they do, and especially love science and technology. Digit is home for me, no matter where I live in the world.
 - We will try and include more comparisons for sure.
 - Companies have no say in how we review products. Yes, sometimes they will refuse to send us products, but most often, they realise that their products cannot hide from being reviewed, if not by us, then by the people who buy their products.
 - We would love to be able to buy every product that is not sent to us for review, but then we'd be bankrupt in a few years. Instead, if we think that a product is going to be popular, and many of our readers would want to know if it is good or bad, then yes, we have bought that product in the past, when the company in question has delayed sending products to us.
 - I'm not exactly sure what it will take for you to be the editor of Digit 10 years from now, but speaking about myself, I think loving every single minute of the work at Digit that I did, being passionate about learning (from everyone around me – from the delivery boys to the CEO), being honest about not knowing something... all of these are some of the things I did that helped me in my career. My favourite line is "Find a job you love doing, and you will never work a day in your life."
- All of us here at Digit wish you all the best for your dreams, especially if that dream is to come work with us :-)

—Robert
