EVEN NEED AN  
INTRODUCTION?  
FROM COMPUTERS  
TO MOBILES, AND  
HEADPHONES TO  
GPUS, IT'S ALL  
HERE...

**THIS MONTH IN TECH:**  
This month we bring you  
the best tech products  
for your pets, explore  
some innovative assistive  
technologies, delve into  
the origins of solar panels  
and, cloud-native coding  
language, Ballerina.

## Firefox 70 blocks social tracking by default

Firefox 70 now has new Lockwise features, performance improvements on Windows and macOS, and has social tracking blocked by default. The new Privacy Protections report shows exactly how many third-party trackers have been blocked so far.

### WHAT'S NEW

## Google unveils Pixel 4, Pixelbook Go and new Nest devices

**G**oogle's annual hardware event saw the launch of the Pixel 4 and 4 XL, the Pixelbook Go, Pixel Buds, Google Nest Mini, Nest Wi-Fi and Nest Hub Max. Google Stadia also got a proper release date. The new Pixel phones pack multiple cameras which is a shift from Google's stance of making the most of just one camera. The phones sport a 12.2MP f/1.7 camera coupled with a 16MP f/2.4 telephoto and an 8MP selfie camera. The multi-camera setup produces higher quality zoomed-in images which are nearly at par with optical zoom lenses. One of the key

features is the Project Soli radar chips which allow for mid-air gestures. Unfortunately, this radar chip uses a 60-GHz mmWave which is not open to commercial use in certain countries, including India. So, the Pixel 4 and 4XL are not launching in India.

## Key partners exit Facebook's Libra

**F**acebook's cryptocurrency venture suffered a significant setback as multiple key partners backed out from the project. VISA, Mastercard, Ebay, Stripe and MercadoPago are the recent partners to publicly exit the project. This exodus was a week after PayPal exited the venture. These exits happened even before the first official meeting of the Libra Council which was to take place on the October 14 in Geneva. With the exit of several

payment processors, making their cryptocurrency accessible seems difficult. Reportedly, several US senators wrote to the payment processors that there might be regulatory conse-

quences, should they go ahead with their partnership with Facebook's Libra. Certain US banks have also indicated that they may have to cut ties with Facebook if regulatory concerns are not addressed early on. Jamie Dimon, JP Morgan Chase Chief Executive, mentioned that Libra is a neat idea that will never happen. Some of these concerns were laid to rest during Mark Zuckerberg's Libra Testimony in Congress.

### Amazon decommissions final Oracle database

Amazon's consumer business has done away with the last Oracle database they had and migrated 75 petabytes of data spread across nearly 7,500 Oracle databases onto purpose-built AWS database services.

### NordVPN confirms hack

NordVPN, one of the most popular VPN services, has recently confirmed that it was hacked last year and also revealed that expired internal private keys were obtained which would allow anyone to set up servers that imitate NordVPN servers.

### NVIDIA launches GTX 1660 and 1650 Super

NVIDIA beefs up the mid-range GPU segment with the introduction of new GTX Super cards, the 1660 and the 1650. The 1660 now comes with GDDR6 VRAM while everything remains the same within the GPU, whereas the 1650 Super is a notable upgrade to the 1650.
