

Move your playlists with ease

also spent inordinate amounts of time carefully curating their playlists on the other music streaming apps such as Play Music, Apple Music and more. The effort of having to do everything over again on Spotify may seem extremely tedious and also may dissuade Indian netizens from trying out Spotify.

Fortunately, there's a pretty simple solution for this conundrum. Users can transfer their existing playlists present on other music services to Spotify by using Soundiiz. This is a third-party service that helps you bring your music collection and playlists from a wide array of music streaming services to others in a matter of minutes.

MASTER SPOTIFY KEYBOARD SHORTCUTS

If you're using Spotify on your PC and want to be an absolute keyboard shortcuts whiz within Spotify as well, simply check out this list (<https://dgit.in/SpotifyShortcuts>).

You can control almost every action within Spotify just by utilising an array of keyboard shortcuts. We'll go over a few basic ones here. The Space Bar key is used to play/pause a track, skipping tracks is Control + Right (arrow key) or Command + Right (on Mac) and going to the previous track is Control/Command + Left. Similarly, to increase the

volume press Control/Command + Up and Control/Command + Down decreases the same. You can create a new playlist by pressing Control + N. This barely scratches the surface of keyboard shortcuts you can use to control Spotify. To learn more, we recommend you carefully go over the aforementioned link.

SHARE MUSIC USING THE SPOTIFY CODES

Taking a page out Snapchat's book, Spotify created a feature called Spotify Codes which are scannable images that allows users to share music by using yet another method. A unique barcode is created for every song, album, artist and playlist on Spotify and users can simply scan these using the new camera button inducted into Spotify's search bar.

To pull up a track, album, artist or playlist's Spotify Code, tap on the ellipses button on the right side of the screen while playing a track, or looking at a playlist or artist. You will find that the album art appears with a unique pattern below it that resembles a phone recording. This is the Spotify Code for the particular song, artist or playlist and your friend can scan this by tapping the camera button in the search bar and hovering the camera over the code. They'll be

instantly brought over to the song, album, artist or playlist you have shared.

FILTER OUT THE CHAFF WITH ADVANCED SEARCH

We've all searched for particular artists, albums or songs at some point in time by using the track titles or artist/album's names. We've all also been subject to a ton of unrelated, unwanted search results owing to the sheer amount of songs these streaming services have accumulated. Spotify lets you narrow down your search by using advanced search terms via operators such as AND/OR/NOT, and also search

years, you can use terms like "Year:1969-1991" to find songs from this specific era only. You can make this search command extremely specific by saying "Year:1973-1980 NOT year:1979 for taste-fully precise results. You can also use search tags such as genre, label and more to further assist you find the exact track you're hunting. Read Spotify's advanced search guide here (<https://dgit.in/spotifysearch>).

PRIVATE LISTENING SESSIONS

Spotify largely features a community-based mental-

Private sessions on Spotify can be a breath of fresh air

results that can narrow down the results to a specific year, genre and more.

If you want to find Queen's songs and albums between a specific set of

ity which is great for sharing music. Sometimes, though, you can't help but crave some privacy from all your Spotify and Facebook friends to maybe give a listen to a few 'guilty pleasure' tracks you've tucked away. If you want a temporary smoke-screen that will mask your listening activity, you will need to start a private listening session on Spotify.

Navigate to the File menu and click on 'Private Session' in the dropdown menu. That's all. You've now entered a private fortress within Spotify where you
