

can listen to whatever it is your heart desires, without having to fear judgement of any kind. If you want to go one step further and hide all your activity from your Spotify and Facebook friends for good, simply open the desktop app, head over to Edit and click Preferences. In the Social section, turn on everything that is displayed and disconnect your Facebook profile as well.

SHARE SPECIFIC PARTS OF A TRACK

If there's ever a killer guitar solo in a track that you want to alert someone about, you don't have to make them listen to the first few minutes of the song on Spotify. You can create a custom link that will make your friend directly jump to the relevant part. You can achieve this on the desktop app by copying the track's URI (uniform resource identifier). To find this, right click on the intended track and select 'Copy Spotify URI'. Paste this into an email or text message and then add the exact time stamp when the 'good part' kicks off. For example, if that brilliant guitar solo begins at 2:45 in the track, add "#time:2:45" to the end of the URI. Now, when your friend clicks the link, they'll be transported to the 'magic' immediately!

ADD SPOTIFY TO GOOGLE MAPS

Music and maps are a match made in heaven when it comes to apps used most in cars. Spotify allows you to integrate itself into Google Maps, which means bidding farewell to having to toggle between two apps back and forth when travelling. To enable this convenient little feature, head over to Google Maps and open the

Control your Spotify playlist while on Google Maps' navigation screen

hamburger menu (three horizontal lines). Tap on Settings and then head over to Navigation Settings. Now toggle the button next to 'Show media playback controls' and select 'Spotify' as your default music streaming app. You will also need to link your Spotify account to Google Maps in order to make this integration work.

You're all set to control your Spotify playlists within Google Maps' navigation screen itself. You'll notice a Spotify icon when you begin navigation to a destination now on the left side and tapping this icon will show you generic music controls for the current track and also an option to browse recently-used playlists.

SYNC SPOTIFY WITH SHAZAM

You can also sync Spotify with the popular music identifying app, Shazam, which saves time by allowing users to instantly add an identified track to their Spotify playlist. Sure does cut out a lot of tedious steps, doesn't it?

First, launch Shazam and tap on 'My Shazam' option on the top-left corner of the screen. Click on the Settings wheel and then navigate to

Streaming. Under this, you will find an option to integrate your Spotify account. Now everytime you utilise Shazam to identify a track, you will readily be given the option to add the track to your Spotify playlists.

RECOVER DELETED PLAYLISTS

If you can't seem to find one of your prized Spotify playlists, have accidentally deleted one or even if you just want to reacquire yourself with one of the 'oldies-but-goodies', Spotify actually retains deleted playlists for quite some time. To recover one of your deleted playlists, navigate to your account page on a web browser. Find the 'Recover Playlists' option on the left-hand side of the

tracks and ensure continuous music by adding this effect in the Spotify app itself. To do this on PC, first open Spotify and then click the down arrow next to your account name and select Settings. Within settings, scroll down and click on Show Advanced Settings. Toggle on 'Crossfade songs' option and use the slider dial to control how many seconds long you want the crossfade to be. This can be anywhere between 0 to 12 seconds long.

On iOS, simply follow these steps - Tap Home > Settings > Playback > Crossfade and then drag the slider to achieve the desired crossfade length. On Android devices, a few steps are eliminated. Go to Home > Settings > Crossfade and

Choose the duration of crossfade between tracks

page and then identify the playlist you want to resurrect. Click 'restore' and voila! Your deleted playlist will reappear in your Spotify playlists

CREATE CROSSFADES BETWEEN SONGS

Did you know that you can add some artistic crossfade transitions between tracks on Spotify? You can eliminate the dreary silence or "dead air", as DJs call it, between

then adjust the slider as required. This feature is especially useful during parties or while listening to albums where the artists themselves haven't employed any kind of continuous sound or crossfade to connect one track to the next.
