1More Stylish True Wireless

Well-rounded sound and competitive pricing

1

More hasn't quite achieved the status of being a household name yet in the audio world, but the company has begun creating waves in this market. Their relatively affordable devices often sport a high-quality look and feel, and they attempt to achieve the same with their new entrant in the true wireless segment – the 1More Stylish True Wireless. Let's see if 1More's latest offering lives up to the calibre of their popular Triple Drivers.

Build and Design

Contradictory to their name, these earphones do not really look all that 'stylish', especially the generic-looking black colour variant we received for this review. The matte, oval-shaped charging case is quite bulky and often protrudes out from under your pocket.

The case also houses a micro-USB charging port, which is a slight disappointment. There's an oval-shaped button which pops open the spring-loaded case to reveal the earbuds.

Each earphone is shaped like an oval polished pebble and house a multifunction button. The physical button on each earbud allows you to pause or play music, skip tracks, and answer phone calls.

The earbuds offer a comfortable fit and we listened to music for hours on end without feeling any kind of fatigue. The 45-degree angled ear nozzles, as well as included stability gels (O-Hooks), enhance the fit and comfort. We were extremely pleased to see that 1More included four sizes of ear tips (XS, S, M, L) and three sizes of O-Hooks (S, M, L).

Overall, the plastic body of the charging case and earphones feels a little flimsy, however, they are quite lightweight. While the case doesn't feel as plasticky as the Redmi AirDots case, it isn't quite as premium-looking as the Galaxy Buds case either.

FEATURES.....	77

Features

The company claims that the earphones should deliver around 6 hours of battery life while the charging case should top them off an additional three times,

offering a total of a whopping 24 hours of battery life. So, you will achieve the same amount of juice as the AirPods 2 and RHA TrueConnect earphones, which is commendable.

The single physical button on each earphone is fairly limited since there's no way to control the volume, which is an absolute shame.

There's a feature which allows users to use the earbuds independently from each other. Unfortunately, the charging of the buds within the case seems to be inconsistent. We ended up with 100 per cent charge on the right earbud, while only 20 per cent on the left.

On a positive note, the earphones are sweat-resistant, offer Bluetooth 5.0 which resulted in great connection stability, and even support AAC and aptX codecs. They are priced conservatively at ₹6,999 (now ₹5,149) which makes the purchase even more attractive.

Performance

The 1More Stylish True Wireless feature 7mm dynamic drivers which generate crisp, warm-sounding, and rich audio. There's an unmistakable thump of bass. The bass response is not too overwhelming, in most cases, how-

ever, in some genres, they did veil some of the finer details in the mids. With the right seal, the noise-floor of these earphones is nearly silent. However, passive isolation is certainly lacking, which is a shame.

In *Centuries* by Fall Out Boy, the highs are extended without producing any harshness or sounding tinny. The bass is tight and punchy in *Uptown Funk*, but not overbearing. The vocals are quite clear despite the bass thumps in the background. Audio separation is great as well and the soundstage is pretty decent for a pair of true wireless earphones. These earphones lean more towards being warm-sounding but bright tracks also play quite well, and with the right seal, offer a well-rounded sound signature.

Coming to battery life, we found that at 50 percent volume, the battery of the buds last 6 hours and 35 minutes while bumping it to 70 percent brings it down to about 5 and a half hours. The charging case offered three, and sometimes four additional full charges. Unfortunately, where the 1More Stylish True Wireless fails is call-quality since the sound is often hollow and unclear.

Bottomline

The 1More Stylish True Wireless sport competitive sound quality, good battery life and a snug seal. While there are true wireless earphones that sound superior to 1More's offering, such as the Klipsch T5 and Sennheiser Momentum True Wireless, the 1More Stylish True Wireless sure does make for a solid pocket-friendly purchase.
