

INDIA'S 'GREEN' HEROES

THESE INDIANS AND INDIAN STARTUPS ARE TRULY ATTEMPTING TO SHOULDER A 'GREEN' REVOLUTION IN THE COUNTRY.

Dhriti Datta | dhriti@digit.in

From innovating novel 'green' tech gadgets and products to repurposing waste products, a host of new-age Indian startups and Indians have upped the ante by hyper-focusing on sustainability, waste management and renewable energy. Some attempt to counteract the absence of basic necessities such as water, electricity, and more as well, further enhancing living conditions in the country. These Indians attempt to educate the citizens of our nation about the perils of climate change and extensive usage of non-renewable resources by providing solutions that cater specifically to them. Without further ado, let's take a moment to appreciate the green initiatives inception by multiple eco-conscious Indians and Indian startups.

INNOVATIVE INDIANS

Meet the harbingers of change who have toiled for years to innovate green solutions for issues that plague our planet and country environmentally.

Jawwad Patel

Inventor, scientist and social innovator, Jawwad Patel is a recipient of a National Award for Excellence in Research and Innovation, which is amongst his numerous accolades.

Jawwad Patel's invention, DewDrop, turns air into water!

Patel reveals, "I have categorised my interest into five domains Water, Energy, Health Science, Space and Agriculture which are the most important verticals for the development of our country and I have invented multiple innovations and technologies in the same". The 26-year-old has multiple green innovations up his sleeve including DewDrop, a smart solar car, and AgriTech.

DewDrop is an atmospheric water generator that essentially generates fresh, consumable water from atmospheric water vapour through the process of condensation, in combination with the Thomson and Peltier effect. The device produces 1.86 litres of water every hour and weighs a mere 900 gms. It comprises of three main units - the smart condenser, filtration and mineralisation system, and a power supply unit.

To combat global warming accelerated by emissions from traditional vehicles, Patel built a smart solar car that runs 100 km on a single charge. Patel further elucidated, "It (the solar
