LOU GEHRIG'S DISEASE

This disease is not named after a doctor, but a famous patient instead. Lou Gehrig was a famous American baseball player who started showing symptoms of amyotrophic lateral sclerosis (ALS) towards the end of his career. His paralysis was rapidly increasing, and he had trouble swallowing. An autopsy was not conducted after his death, which would have helped science.

MISS HAVISHAM SYNDROME

The syndrome describes the propensity for some elderly people to live in a state of squalor, in a messy and cluttered house, and avoiding the company of others.

It is named after the character of Miss Havisham from Dickens' Great Expectations. The condition is also called Diogenes syndrome after an ancient Greek philosopher who supposedly lived in a large jar in Athens.

MACHADO-JOSEPH DISEASE

The condition is abbreviated as MJD and is a hereditary form of Ataxia. The disease was identified in 1972, and named after the patriarchs of two families where many of the members had the diseases. These men were named William Machado and Antone Joseph. The disease is particularly prevalent among people of Azorean or Portuguese descent.

PARKINSON'S DISEASE

While the disease was known to the ancients and noted in Egyptian, Greek and Indian medicinal texts, the English surgeon James Parkinson, described six cases in 1817 in a paper titled "An Essay on the Shaking Palsy". It was only sixty years later that French neurologist, Jean-Martin Charcot coined the term "Parkinson's disease" to refer to the condition.

MUNCHAUSEN SYNDROME

This is the name of a disease for a patient who suffers from a condition that does not exist. The patient may be pretending to get attention or care from a doctor, or just to get particular medicines. Some patients can even manifest symptoms which can be hard to cure. The condition is named after the eccentric fictional German, Baron Munchausen.

TOURETTE SYNDROME

Georges Gilles de la Tourette was a French physician who described the nervous physical and verbal tics in "Study of a Nervous Affliction" in 1857. In the study, he referred to the disease as "convulsive tic disorder" and said that a new clinical category could be defined. Jean-Martin Charcot, a famous French neurologist bestowed the disease with its name.
