Michael Kors Access Runway Smartwatch

Fashion brands often tend to emphasize aesthetics rather than function which results in swanky looking fashion accessories that can hardly do what they're supposed to. Michael Kors has swung the other way and picked Wear OS as the underlying platform for the Michael Kors Access Runway Smartwatch.

Featuring a classic two-toned golden steel frame that's reminiscent of luxury watches of yesteryears, the Michael Kors Access Runway is the personification of "classy yet sexy". The watch features two navigation buttons and one dial for easy navigation. A plethora of Michael Kors branded watch faces are brought to life by the 44 mm AMOLED display which is bright enough to be read in broad daylight and crisp enough to blend the watch face into the overall aesthetic of the watch. You'd be forgiven if you'd have thought of it as a mechanical watch instead of a smart watch.

The watch features an in-built GPS sensor, heart rate sensor and step counter. Wear OS, with its fluid interface

and integration with the Android ecosystem makes the watch as powerful and functional of a fitness tracker as any other. It's even rated as "swimproof" so it's geared for all sorts of fitness activities that involve copious amounts of sweat and water. All that said, the Access Runway falls short when it comes to battery life. The AMOLED

display does help but you still have to charge the watch every day. All in all, the Michael Kors Runway Access is a luxury watch for the health conscious fashionista.

SPECIFICATIONS

COLLECTION NAME: Runway | **MODEL NUMBER:** MKT5045 | **DIAL COLOR:** Black | **DIAL SHAPE:** Round | **DIAL DIAMETER:** 41 mm | **STRAP COLOR:** Gold | **STRAP TYPE:** Stainless Steel | **CASE MATERIAL:** Stainless Steel | **STRAP WIDTH:** 18 mm | **WATER RESISTANCE:** 50 m | **FUNCTIONALITY:** Smart watch | **MOVEMENT:** Quartz | **SPECIAL FEATURES:** Water Resistant | **OS:** Wear OS | **PRICE:** ₹25,995

Adidas AlphaEdge 4D - Star Wars Edition

When you have over 17 years worth of data around what runners want from their shoes, you're bound to see some level of innovation. That's what resulted in the Adidas Futurecraft 4D technology which has now evolved into the AlphaEdge 4D. Combining their own learning along with the Digital Light Synthesis technology by

California-based Carbon, Adidas has come out with a 3D printed midsole that gives runners tuned support and proper cushioning. And if you're a fan of Star Wars, then the Death Star themed TPU overlays might be just what you've been looking for. It sports dark blocky spherical motifs that's characteristic of the Death Star design.

The TPU overlays aren't just about style, they're functional as well. The TPU overlay at the heel provides a snug fit to lock

your foot in place and the TPU overlay on the midfoot helps stabilise your lateral movements. Then there's the additional reflective layer at the top to help with low-light visibility. The 4D midsole has a lot of open space thanks to the 3D printed mesh design which helps reduce weight without compromising the rigidity of the shoe. The overall package makes for a snug fit so picking the right size is absolutely essential. Slipping it on is a bit of a task but once laced up, it's very comfortable.

The outsole is built using a black rubber mix by Continental which features traction pods to provide a greater level of control to the runner. The combination of the midsole and outsole is designed to absorb pressure and compensate with the right amount of cushioning needed to enable you to run for longer distances.
