

FEBRUARY 2019

MWC is the biggest event of the month, and 2019 was no exception. A lot of promise, but fell short of delivering...

MWC FOLDABLE PHONES

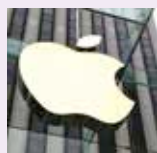

There were so many of them at MWC, with the Samsung Galaxy Fold

launching just before you'd think those being showcased at MWC would pale in comparison. They didn't, even at the time, and the drama with the Galaxy Fold meant that brands were right to not rush their designs to production without adequate testing. Huawei's foldable Mate X, Oppo's prototype phone, Motorola's Razr 2019, LG's bendi screen, etc, were all promising for the future, but of those only the Razr and the Fold are currently selling in the market. We hope to see many more in 2020.

SAMSUNG'S GALAXY S10 SERIES

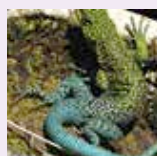

The launch of the S10 series overshadowed all other phone launches in February. The Galaxy Note was probably a hotter topic just before MWC, but it soon developed

problems and was only getting negative press. The S10 series, however, was beautiful, and quite a few Digit employees took the plunge to buy one.

APPLE FLEXED ITS MUSCLES

First Apple revoked the enterprise certificate of Facebook, which meant that Facebook was reduced to being just another app that needed to pass scrutiny, just as an app you or I could build and submit to the App Store. Then it did the same to Google, as a way of establishing itself as the people's choice champion of privacy.

BIOLOGY MYSTERY

A species of lizard living in the Andes mountains can give birth to young, as well as lay eggs, which biology thought to be impossible! The rule was that once an animal

evolves to give birth to live young, it will not regress toward laying of eggs. The species of Lizard in question however, gives birth to live young in extreme cold, and lays eggs in warmer weather.

- Genetically engineered mosquitos are created that might be able to spread infertility in the mosquito population.
- 2018 was the worst year for smartphones, as only 1.4 billion phones were sold...down 4.9 percent!
- 19 year old hung himself after parents refuse to buy a flagship phone for him to play PUBG on!
- Apple finally fix Facetime bug, and offer to contribute to the education of the 14-year old who found the bug.
- 617 million hacked accounts put up for sale on the dark web

MARCH 2019

Tax time in India since it's the end of the financial year, which we don't care about because we earn too little... so instead, here's what was grabbing our attention at the time...

FAST INTERNET

Let's face it, we all love to live vicariously, and reading about fast speeds turns us on. So when a new world record for undersea cables was set in March, we all imagined what we'd do with such speeds ourselves, didn't we? Running from Virgin Beach, US, to Balboa, Spain, an undersea cable called Marea was used to arrive at transfer speeds of a whopping 26.2 terabits per second!

MORE FOLDABLES

March saw renders of a foldable iPad being leaked by a Dutch tech website called LetsGoDigital.

There's been no confirmation since, though, so it may just be a rumour. Along the same lines, rumours started flying when it was discovered that Google had filed for a patent for Z fold displays. We'd love the ability to fit a 17 inch (or larger) monitor on to a small form factor laptop. Corning announced that it was working on foldable Gorilla Glass screens...

GOOGLE AND FACEBOOK ROBBED

A man from Lithuania duped Google and Facebook of a whopping 122 million dollars! He did this by making fake invoices, creating fake email trails between him and employees of the companies, and raising fake bills. He posed as various representatives of a Taiwanese company called Quanta Computer, and opened bank accounts in their name in Latvia, Lithuania, Cyprus, Slovakia and Hungary. He then continued to dupe Facebook out of \$99 million and Google out of \$23 million. When he was finally caught by Google, he pled guilty, and agreed to pay back \$50 million to the two companies. Now don't lie, despite knowing this is wrong, you're still impressed by the ingenuity of this one man, aren't you?

S10 WALLPAPERS

While Samsung's S10 devices were being ridiculed by some for the punch hole

made in the displays for the front camera, others took it as a creative challenge, and we ended up with wallpapers that incorporated the camera into the whole visual.
