

APRIL 2019

A month that starts with foolery, and often ends in foolery too!

ISRO LAUNCH

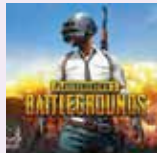

ISRO successfully launched EMISAT and 28 nano satellites from Sriharikota. The mission was the 47th mission of the Indian Polar Satellite Launch Vehicle (PSLV), and included 28 nano satellites from Lithuania, Spain, Switzerland and the US. Just a week earlier India tested an anti-satellite (ASAT) missile in a mission titled Shakti.

TIKTOK BAN

The Madras High Court asked the central government to ban access to TikTok because it claimed the app was promoting pornography. The court was hearing a public interest litigation against TikTok that claimed the app could be used to lure children. Eventually TikTok was removed from Google's Play Store and Apple's App Store because of this. Eventually, the ban was lifted by the

Madras High Court and the app came back to the online stores for Indians, causing ardent Tik-Tokers to rejoice!

PUBG BAN

After Gujarat's banning and then unbanning of PUBG, Nepal and UAE followed suit. The game was banned in Nepal for some time, while concerned parents in the UAE were seeking to ban it there as well. Saner heads prevailed, however, and Nepal's Supreme Court declared that banning it could adversely affect citizen's freedom of expression.

INDIAN STUDENT DESTROYS COMPUTERS

A 27-year-old student from India, who was studying at College of Saint Rose, Albany, New York, pled guilty for destroying 66 computers in the college using a USB killer device. The killer device causes the

computer to quickly charge and discharge capacitors on the PC, and kills the USB port, the hard drive and motherboard. He was facing a 10-year jail sentence, but was eventually ordered to serve a year in prison. He also had to pay the damages of \$58,471 for the equipment he destroyed.

Also

- April Fool's day pranks abounded
- YouTubers use caltech camera to capture speed of light at 10 trillion frames per second
- Game of Thrones was the most popular show to have malware-infected versions pirated online
- Windows 10 no longer needs you to 'Safely remove hardware' anymore as of March 2019
- BlackBerry Messenger shut down for good (goodbye BBM...)
- Cows in Britain adopt 5G before humans! 5G is used to track and milk the cows using robots

MAY 2019

A month where we prepare our Anniversary issue, which is just as killer as this issue you hold in your hands!

COMPUTEX

May is the month for Computex, and we rush off to Taiwan to get hands-on with the latest in technology.

It's Asia's version of CES, and we love it! Gaming laptops were the rage, much like with CES earlier in the year. The big news for us PC users was the launch of Intel's 10th Gen Ice-Lake-U mobile processors. Dell also launched all new workstations, while there were also many refreshes to models from all brands, across all categories. You should check out our Computex hub on digit.in to read all about it. All of our Hubs are located here: <https://www.digit.in/hubs/>

FOLD CANCELLED

Samsung cancelled all pre-orders of the Galaxy Fold that were not re-confirmed before May 31. The Fold fiasco really hurt Samsung, as the device was the butt of many jokes being shared by consumers. Samsung CEO even admitted that they had rushed the Fold, and shouldn't have.

400 MILLION ACTIVE USERS

Google announced that India had 400 million active internet users, and 350 million were connected by smartphones. They also said that the average Indian internet user was consuming about 8 GB of mobile data per month. It also revealed that non-metro search volumes were increasing much faster than metro searches on mobiles. Plus, voice search was skyrocketing!

HUAWEI BAN

When the US banned Huawei products because of security concerns, it impacted the company, and many other companies as well. Being blacklisted meant that suddenly there were millions of devices owned by companies and individuals alike that would get no support from Huawei, which was a concern. It was eventually given a 90-day reprieve to be able to push updates for

all its devices. Then came the announcements and leaks about companies pulling support for their devices, for example, it was leaked that Microsoft may block Windows updates to Huawei laptops, and providers rushed to find new partners to align with for upcoming 5G services. At the time, Huawei was one of the biggest players in the 5G space globally.
