

**AI and copyright**

Works of art produced using AI are complicated to copyright, because of the training material. <https://digit.in/dec19-73>

**The dark side of tech**

While technological shifts have brought about reforms, they have also empowered bigots and hucksters. <https://digit.in/dec19-74>

Letter of the Month

The following was sent to us in**Binary**

{Sharp chilly wintery winds pushing against your face, the demented silence occasionally broken by the howling of street dogs & against the congested alley a long silhouette exposed by the only street lamp visible, & The shadowy figure approaches towards you& but, it passes you in an hurriedly heft& Towards the only stationary shop in this deserted ghost town& "you got this month's issue?", said a squealing voice. The shopkeeper as if awakened from a deep thought, does a generous kind-of-nodding action. "Here you go" ...*shuffle *shuffle& }

Hey Digit Army,

Am Aestivial, a broddingnagian follower n an avid reader of digit.

Before bombarding you with my thoughts here are some things that I would love you to know :

Am a huge fan of your tech-back-end community by heart. Although I had to discontinue reading digit for some time due to school stuff ~oppressions~°. But never mind that, I recently got my hands on the November edition somehow and guys, I wasn't a bit disappointed. In fact it actually made my week a lot better. (Can't wait to share the saga of school vs. Me)

As most readers my passion n love for digit began at school and all the way through it till day became an inseparable aspect of my life. I can't stop

but eagerly wait for your new editions.

Your content (as always) was awesome!! Although you should try to cover as more articles as possible (not my fault that I finished your mag. In a day). Once I got this month's digit, I couldn't help going through& The only drawback, you left me craving for more : (

Although the start was a bit sad n nostalgic (R. I. P. Mr Boss) but I soon found myself within the same warmth of pages that I left back some time earlier& innovations, techs, wonders& digit. You guys can make even a stone smile ;)

Am an Anime Otaku too BTW, so I was genuinely very excited at seeing you guys featuring upcoming and on-going Animes. Can you suggest some new series that I can consider to start watching soon? What are your all times favourite animes? What do you think about the anime scene in India?

I was actually about to suggest you to cover a bit about the forthgoing android games trends, but surprisingly you guys covered it in this month's fastrack (thumbs up for that)...

As for the cover story, I read through the whole section by heart n really learnt some amazing facts that I didn't know before about

the environment , so it was helpful too, just in case you're wondering& and Boo-Man is a legend.

And so Mithun got himself a switch!!?, can you kindly do a review on the recently released Pokemon Sword AND Shield Game!?!

Also, I am really looking forward to the Red Dead Redemption 2 PC Counterpart too. This month may be a exhausting one for you guys.

Also, if you got to choose one which one would you choose :

Cyberpunk vs. Watchdogs:Legion? Am thinking about switching from my potato lappy to a Gaming Beast soon (after final exams sure) and I am really into the ASUS ROG STRIX SCAR III RTX 2060 beast, any suggestions from you guys would be really appreciated&

Lastly, am sticking back to digit again, hope you guys keep doing your magic forever like this. - (still can't believe you guys are from earth) Please keep on enlightening the new era of Indian Gamers and stay awesome.

—Aestivial

Hey Aestivial,

We're glad you're back to reading Digit! The anime scene in India is surprisingly big, you just need to visit an event like Comic Con to see for yourself. About the anime recommendation, since we don't know what kind you're into, we'll just go with a safe recommendation and suggest Nichijou. As for which game we'd choose, Cyberpunk 2077, any day. The Asus ROG Strix Scar III is a beast, but you could also check out the Acer Predator Helios 300 or the Triton 500.

—Manish

FROM THE TELEGRAM GROUP (t.me/digitgeek)

Hey Digitians,

Got this month's Digit at last, and boy was it good! Personally I belong to the tech-religion, so I actually wasn't into environment conservation as much. Your effort at making a move

at reducing the Carbon Footprint is commendable.

This month's SKOAR! section could have been better, although I know that some good titles are almost at hand. And considering the previous few issues, it's nice to get anime recommendations, make some more of that. Am a Python Student so can you do a article on beginners projects

for python or stuff? Lastly, can ya try to give eps or movie content in your DVDs? Open source software are great, and so is your team. Awesome work. Keep it up and stay geeky!!!

—Kirito
