A COLLECTION OF PRO TIPS FOR EVERYTHING. Without being limited to a particular topic, these tips are from popular software, to coding, to browsers, search, storage rules, password rules, mobile device hacks, bios cracking, tweaks explained and everything tech under the sun.

ically tackles the skies even in complicated situations, and seamlessly works around objects that protrude into the skies such as buildings, wires and pylons. The only situations where you need to be careful are when there are sky is visible through enclosed spaces, such as a person having his arms on his waist. There are a number of presets available, that merge beautifully with your existing image. There is also some colour tweaking to match the lighting. You can choose the transparency of the added

video, the video is stored non destructively in the app, and allows you to freely change the filters later.

GET THOSE PRETTY SCANLINES

Glitch Studio is the app to use if you want to make some glitchy photos or videos. The best things about the app is the amount of control over the glitch effects, and even a masking mode that allows you to prevent the effect from being applied to certain portions of the image. Additionally, you can

INSTAGRAM, TIKTOK AND SNAPCHAT are all saturated with visuals competing for attention, and it can take some effort to create images or videos that can really stand out. However, there are some apps that can make the task at least a bit easier. A tripod for the phone is required for most of the apps. Additionally, many of these apps will use software based image stabilisation for videos, so expect some additional cropping as well.

GET INTERESTING SKIES

If your image has the sky as a background, the image can be

instantly improved by making the skies more captivating, especially if the original photo had a bland patch of sky. The app called Picnic is dedicated to doing just that. It automat-

layer as well. The skies for night and Christmas are particularly interesting.

BEND REALITY

If you like the surreal visuals of Inception or Doctor Strange, then nception is an app that can replicate the look and feel for both videos and photos. There are 33 distortion effects that mirror the image along various planes. The application supports native video recording up to 120 fps in 4K. While you can choose to slap on a distortion filter to get real time feedback while capturing a

micromanage the amount of noise, chromashift, dithering, scanlines and ASCII. The app has an overwhelming number of options to tweak, and the only thing missing at this point is the ability to save settings for reuse. This means that if there are any important areas in the image, they will not be obscured by the glitch effects. While the few available effects for free are also pretty kickass, it is worth it to unlock the PRO filters and get the complete package. Another great thing about the app? It allows you to export GIFs.
