

Facebook acquires Beat Games

Facebook acquired Beat Saber developer, Beat Games, which will now join Oculus Studios under Facebook. <https://dgit.in/dec19-07>

Flip to Shhh

A new Digital Wellbeing feature called 'Flip to Shhh' will reportedly be available on the Pixel 2 and 2 XL soon as well. <https://dgit.in/dec19-08>

Components within the shorter stem

The AirPods Pro employed a shorter stem, much to the excitement of all Apple fans. This stem houses a couple of golden microphones, gilded antenna hardware, a fancy chip package and a black rectangle surrounded by metal brackets which could be the new force sensor which senses squeezes on the stem.

AirPods Pro

The tail end houses quite a few elements

The tail end of the AirPods Pro houses a tiny coax connector and Apple's custom SiP where integral chips such as the H1 and others reside. The board housed in this area is even smaller than the last AirPods iteration, allowing for a lot of additional space. The backside of this board has more chips but the tiny markings don't exactly allow a clear reading of those.

A wider case with not one, but two batteries!

The case encompasses two batteries which leaves the AirPods 2 and Galaxy Bud's batteries within the cases in the dust. There's also a silver component which looks an awful lot like a microphone. The Lightning port, surprisingly, is modular. However, the same cannot be said for the entire unit and Apple themselves stated that the AirPods are not repairable, only replaceable.
