

Switching User-Agents

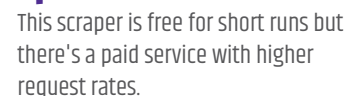

A simple javascript code can be written as the first thing that's sent across to the client when a request is received. A bot may not be able to execute the javascript and subsequently will be kept away from either the entire website or portions of the site that the developer wanted to obfuscate. Here's a simple code to do just that:

```
{var a = function(s) {var  
l = new Array(Math.ceil(s.  
length/4));for (var i=0;  
i<l.length; i++) {l[i] =  
s.charCodeAt(i*4) +  
  
(s.charCodeAt(i*4+1)<<8)+(s.  
charCodeAt(i*4+2)<<16)+(s.  
charCodeAt(i*4+3)<<24);}  
return l;}, b = function(l)  
{var a = new Array(l.  
length);for (var i=0; i<l.  
length; i++) {a[i] = String.  
fromCharCode(l[i] & 0xFF,  
l[i]>>>8 & 0xFF,l[i]>>>16 &  
0xFF, l[i]>>>24 & 0xFF);}  
return  
a.join('');};return  
function(c, w) {var v, k, n,  
z, y, d, mx, e, q, s, f;if
```

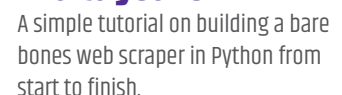

```
(c.length === 0) return('');  
v = a(window.atob(c));k = a(w.  
slice(0,16));n = v.length;z  
= v[n-1]; y = v[0]; d =  
0x9E3779B9;q = Math.floor(6 +  
52/n); s = q*d;while (s !== 0)  
{e = s>>>2 & 3;  
  
    for (var p = n-1; p  
>= 0; p--) {z = v[p>0 ? p-1  
: n-1];mx = (z>>>5 ^ y<<2)  
+ (y>>>3 ^ z<<4) ^ (s^y) +
```

One of the more popular scrapers out there with the ability to easily build APIs as well.
