

ONLY MUSIC, NOTHING ELSE

The successor to the Sony WI-1000X is a significant upgrade that promises exceptional audio quality and all-day comfort

SONY
WI-1000XM2

If you're in the market for a good pair of headphones with active noise cancelling features then Sony is one of the top brands that comes to mind. They've certainly made a mark with the WH-1000XM3 last year which featured the HD Noise Cancelling Processor QN1. It also had Alexa and Google Assistant integration which meant that you could be a lot more productive thanks to your new pair of headphones. However, not everyone prefers to use headsets as they might be deemed bulky. Should there exist a pair of In-ear Headphones with the same HD Noise Cancelling Processor QN1, that are wireless, smaller, sleeker and provide the same world-class performance, then we'd be in business. Thankfully, Sony's gone ahead and given us just that in the form of the Sony WI-1000XM2 Wireless Noise Cancelling In-ear Headphones.

INDUSTRY-LEADING NOISE CANCELLATION

At the heart of the Sony WI-1000XM2 lies the HD Noise Cancelling Processor QN1 which is energy efficient as it consumes very little power while significantly cancelling out most of the ambient environ-

mental noise across all frequencies. This ties in with the Sense Engine to automatically adjust the noise cancellation levels depending on what you are doing at that particular point in time. The QN1 processor relies on Sony's Dual Noise Sensor Technology which

makes use of two microphones to accurately capture the ambient noise which is later cancelled out so that the listener only hears the music. The QN1 is even optimised to function at high altitudes such as in aircrafts. This Atmospheric Pressure Optimisation was integrated for this very reason.
