UNMATCHED SOUND

The Sony WI-1000XM2 features an HD Hybrid Driver System which optimises sound across a wide frequency spectrum. It uses a 9-mm dynamic driver which was custom designed for the WI-1000XM2 so

provide deep bass and clear mids. Then there's the Balanced Armature driver which dishes out the highs in a crystal clear manner. This HD Hybrid Driver system is powered by the Sony HD Noise

Cancelling Processor QN1 which has powerful noise cancelling features, 32-bit Audio Signal processing and a Digital-to-Analogue convertor that's supported by a headphone amplifier. The end result is a true-to-source audio reproduction that audiophiles crave for. This might seem unbelievable but thanks to the Digital Sound Enhancement Engine HX (DSEE HX), the Sony WI-1000XM2 is capable of upscaling uncompressed digital music files to their original high-resolution audio standards.

EXCEPTIONAL BATTERY LIFE

Despite the slim form factor, the Sony WI-1000XM2 has a massive battery life of up to 10 hours for every charge cycle. Moreover, the headphones also charge up quite quickly. A 10-minute charge cycle can give up to 80 minutes of play time. The USB Type-C charging port is hidden on the left prong of the headset. Simply open the port cover and plug a charger in. The entire unit takes about 3.5 hours to charge to completion which then gives you 10 hours of play-

back. You can easily figure out how much charge the headphones has by using the Headphone Connect app or by putting the headphones on and powering them on. A short audio cue will tell you exactly how much charge is left.

COMFORTABLE DESIGN

The Sony WI-1000XM2 was designed to be secure and comfortable for all-day wearing. The headphone even comes with a travel-friendly carry case that's small enough to fit into your pocket and has all the accessories including an aeroplane plug adapter.

The neckband itself is quite flexible and has the right amount of weight that lets it sit firmly on your neck. And the earphones themselves feature an angled design that lets it sit deeper and more securely in your ear. This helps with the passive noise cancellation and doesn't slip out as easily. ■
