

DIVEROID

Underwater diving cameras and diving computers ain't cheap. This is exactly why DIVEROID is a disruptive gadget that basically turns your smartphone into an all-in-one dive computer, underwater camera and a log book that is photo-synced. It combines all this gear into one handy device and thereby eliminates having to buy a separate diving computer, log book, camera and compass.

The device can measure depth, dive duration as well as ascending speed to ensure safety for diving beginners. The device is also capable of giving out alerts to divers if they've reached their maximum diving depth or are ascending too rapidly. The accompanying app displays the dive's video feed along with data

such as depth, time, temperature and more. The dive profile automatically records the exact time and depth at which you clicked a particular photo. It also displays emergency alerts along with elaborate instructions telling divers what to do exactly to safely navigate through or exit the waters.

The DIVEROID comes equipped with a high-quality camera... the camera on your smartphone! Cameras on smartphones are highly competent these days and buying specific diving cameras are an added cost you don't really need to undertake with DIVEROID. You can capture photos and videos during your dive and share this content on popular social media platforms as well.

It also tackles the problem of low-light in deep waters by performing real-time colour correction with the integrated algorithm. The housing in DIVEROID protects your phone from factors such as pressure, depth, water damage and more. If the phone features ultrawide and telephoto lenses, they will be at your disposal as well.

Matrix PowerWatch 2

Smartwatches are increasingly gaining popularity, however, one major strife with these is usually the battery life. The abysmal battery life on some smartwatches causes them to sometimes not even make it through a day and no one wants to charge yet another device every single day. The Matrix PowerWatch 2 completely turns this situation on its head since this smartwatch may NEVER need to be charged. Powered by body heat and solar energy, this smartwatch lets curious users utilise the app to check daily counts of thermal and solar energy. By which we mean, how much energy you have given it vs how much it has procured from the sun. Pretty cool stuff. Apart from this seemingly revolutionary feature, the Matrix PowerWatch 2 is capable of doing pretty much everything a regular smartwatch does. The features include fitness tracking using GPS, on-screen notifications, steps, sleep monitoring, calorie count and heart rate sensor. It even syncs with Google Fit or Apple Health. Additionally, there are a total of four navigation buttons which solely control the watch. No touch controls, unfortunately. Nevertheless, it's quite a good investment, especially if you never want to spend another rupee on a smartwatch in your life and are fine with the available functionalities.

SimpleHuman Sensor Mirror Hi-Fi

This is more than a mere mirror that shows your reflection. The SimpleHuman Sensor Mirror Hi-Fi is a customisable mirror, a lamp and an Alexa speaker, all combined in one. The sleek, modern design can reportedly fit in just about any bathroom at 9.1 inches wide, 4.1 inches high and 15 inches all around. A ring LED light is adorned around the mirror that ranges from 100 to 800 lux. The light can also automatically turn on when you approach the mirror using motion detection sensors. Users can manually adjust the brightness level by operating a control bar situated on the right side of the mirror. The base doubles up

as a smart speaker featuring a 2.5-inch acoustic driver and physical controls to adjust volume, pause/play and skip tracks. The mirror, when connected to the accompanying SimpleHuman app (iOS and Android) allows users a plethora of customisations including colour temperature, preset modes, brightness level, and more. There's also an adjustable EQ which allows granular control over the speaker's sound profile. The SimpleHuman mirror, aside from all its bells and whistles, is also a great mirror that offers features such as light control, magnification control to apply makeup and just great plain ol' reflection!
