XPG Battleground Prime XL

XPG only recently made the foray into gaming peripherals, but they sure did so with a bang. Gaming mice, keyboards, cases, headsets, they've got it all. They've also got a premium gaming mouse pad on offer too. The Battleground Prime XL.

The Battleground Prime XL is a massive mouse pad, and covers the entire desktop so your peripherals are all on the same surface. The surface of the mouse pad uses CORDURA fabric, while the back uses non-slip rubber. On the top left of the mousepad you have the lighting control buttons. On the edge of the entire mousepad you have the two-zone RGB fibre optic light strip. The mouse pad comes with a detachable cable which you can plug into the mouse pad and your system to power the RGB lighting. It uses a micro USB slot and Type A slot.

The CORDURA nylon fabric is tough, boasting tear-resistance, water-repellent material. It's also smoother than regular cloth mouse pads; less friction for the mouse.

The control box features a single button which is used to control the lighting on the mouse pad. Both the zones can be altered between by double-pressing

the button. Similarly, single-pressing changes the style of lightning for the currently active RGB zone.

For colours you have the option of white, blue, indigo, green, yellow, purple, and red, all of which can be mixed and matched until you're happy with the lighting scheme. If lighting is not your thing, you can always leave the mousepad unconnected, and enjoy it light-free. It's still a fantastic mouse pad. It will also most likely last you a long time, thanks to the CORDURA fabric used.

PRICE: ₹4,619

SPECIFICATIONS

MATERIAL: CORDURA fabric | **DIMENSIONS:** 900 x 420 mm | **DEPTH:** 4mm | **LIGHTING EFFECT:** Dual color LED | **CONNECTOR TYPE:** Micro-B USB | **CABLE LENGTH:** 1.8M | **VOLTAGE:** 5V

NoiseFit Evolve Sport

It's not easy to get a smartwatch with an AMOLED display with such a large assortment of features at this price point. The classic round-shaped body is built from a single block of anodised aluminium. There are four colours to choose from - Dusk Blue, Blush Pink, Slate Black and Sport Edition; each colour option comes with matching straps.

There are five watch faces to choose from, each ascribing to a different aesthetic. It has only one button which does not double up as a dial. The overall functionality is better accessed using the touch screen. While the watch on its own is quite feature rich, connecting the NoiseFit PEAK app opens up all the additional features such as sports logging, notifications and gives you access to updates. However, the app isn't really polished and tends to not synchronise with the watch every now and then.

For a smart watch, the NoiseFit Evolve Sport can be said to have really good battery life. It easily lasts for two weeks on standby and if you happen to have active heart rate tracking

and make use of the sport modes, then you can get about 3-4 days out of a single charge. The charging pod isn't magnetised but it has a clamping mechanism which holds the watch in place while it charges.

The watch does not support installing apps as is the case with WearOS devices and Apple Watch. However, this is easily forgiven considering how economically the NoiseFit Evolve Sport is priced. If the app were to be polished then this would end up being a much better package.

PRICE: ₹5,999
