

MINOR ANNOUNCEMENTS

OnePlus Concept One

Featuring an electrochromic glass panel, the OnePlus Concept one can turn the rear panel opaque in just 0.7 seconds and effectively hide the rear camera assembly. It took about 18 months for the company to incorporate the tech into their smartphone and it was a challenge since the glass is only 0.35mm thin. There's no word yet regarding availability.

Galaxy Note 10 Lite

Supporting a massive 4,500 mAh battery, the Samsung Galaxy Note 10 Lite is meant to last you the entire day with ease. The device is still quite large at 6.7-inches and will feature a triple camera setup on the rear consisting of telephoto

and ultrawide lenses aside from the normal sensor. As a Note device, it will naturally come equipped with a stylus. The Samsung Galaxy Note 10 Lite is yet to get a launch date.

MSI MEG Aegis Ti5

The MEG Aegis Ti5 is a prototype gaming PC that's set to be available later this year. It's a decked out gaming machine powered by the latest Intel Core processor and the latest NVIDIA graphics card. There's even a 5G-enabled variant and the top model will supposedly ship with 128 GB of RAM. The hero feature is the dial which can control the RGB lighting, fire up your favourite games and show system health.

Charmin Rollbot

Technology is a great enabler, even if the task that needs to be enabled is as simple as getting yourself a toilet paper roll. Charmin is a concept bot that can be summoned utilising your smartphone. The bot will then, dutifully, navigate the confines of your home using its array of infrared sensors to bring you a toilet paper roll or as the makers call it, emotional support in your moment of need.. Charmin(g), isn't it?

Tombat Jennie robot puppy

Designed to provide comfort as a therapy animal for patients who are unable to take care of real animals, the Tombat Jennie is as close as you can get to the real thing. This is a golden retriever robot puppy that responds to touch, wags her tail and even lets out a little bark every now and then. It even comes with voice activation software, so the pup can respond to your commands. These companion bots are expected to cost approximately \$450 and might hit the shelves around May 2020.

Hyundai Urban Air Mobility SA-1

Uber has been working with several technology giants towards realising their autonomous cars. But cars aren't all that Uber is interested in, the Hyundai Urban Air Mobility SA-1 is an air-taxi concept which can seat five people and has a cruising speed of about 200 MPH with a ceiling of 1,000-2,000 feet. Uber already operates a helicopter service in select locations and this would help them democratise their air-taxi service by further lowering costs.
