

GAMING AT CES

Alienware Concept UFO

This is a miniature handheld device with an 8-inch display, measuring barely more than an inch and a half in thickness, running on an Intel 10th generation processor. The Concept UFO was running a full-blown version of Windows 10, and thus, supports Steam, Origin, Epic launcher etc. The controllers come off the sides and dock together using a battery pack, combining them into one big controller much like the Nintendo Switch with its grip attachment, the only difference being that the Switch doesn't have battery backup in the included grip attachment.

ASUS

How high of a refresh rate is enough? Well, as per Asus and Nvidia, 360Hz should do the trick, for now. Asus has announced the new ROG SWIFT PG32UQX, which is a 24.5-inch Mini LED 4K high-dynamic-range (HDR) gaming monitor with a 360Hz refresh rate. Currently, moni-

tors with 144Hz refresh rates are the norm, while 240Hz displays are usually preferred by competitive gamers. The new gaming monitor by Asus is aimed at upping the ante and is being marketed as an 'esports display' by Nvidia, who have also confirmed that the panel is G-SYNC compatible. In addition, the monitor comes with options to support refresh rates of 144Hz, 240Hz and of course 360Hz.

Corsair

Corsair went back to air coolers with the A500 sporting many quality of life improvements aside from being geared to handle the higher TDP processors. Elgato announced a

new capture device, the Elgato 4K60 S+, that can record and stream in 4K HDR and even features the much requested SD card slot. Origin PC arguably had the biggest thing on offer as they brought together offerings from most of the Corsair subsidiaries in one product, the Big O. It features a high-end PC and either an Xbox One S or PS4 clubbed together with custom liquid cooling for both systems.

Razer

Razer racing features a hydraulic powered seat, racing wheel, pedals, and a massive projection screen. The Eracing Simulator is something that anyone can enjoy. Racing simulators with hydraulic seats offer a more realistic gaming experience if the actuation is smooth. The 128-inch curved projection screen also provides a great level of immersion. The price wasn't revealed, but based on prices of similar setups, we'd guess a minimum of ₹10,000.

MSI

MSI focused on two new gaming laptops including the GE66 Raider and the GS66. There's plenty of RGB going around but the most impressive part was that MSI will be including a 99.9 Wh battery in both models. We also saw the Creator 17 laptops, the first laptop with a mini-LED backlit display that features a brightness rating of 1000 nits. On the software front, MSI announced new optimisations and improvements to the Dragon Centre and the Creator Centre.
