

STARTUPS

Wagr

Based in Bengaluru, Wagr is an IoT startup that has made a smart location and fitness tracker for your furry buddies. Each Wagr device costs about ₹6,999 and the company is said to be exploring international markets once it gains a larger foothold in India. The device weighs less than 30g, runs for up to four days on full charge and is powered by a Qualcomm SoC. It's compatible with iOS 10.0+ and Android 4.0+, and of course anything that barks and meows.

Pillo

Pillo Health is a Boston-based startup that makes Pillo, an interactive voice-activated medication tracking robot assistant. The robot is equipped with facial recognition which can be programmed to alert the patient when it's time for their next dosage and only dispense medication to the right patient. This makes it possible to deploy the robot in larger health care establishments. And if the patient isn't exactly being cooperative, it can even rat them out to their health-care worker or even their doctor.

Strom Motors

This Mumbai-based EV startup showcased the Strom-R3, an all-electric three-wheeler with a range of 200 km. The Strom-R3 takes about 3 hours to be fully charged and relies on a 13 kW motor that puts out 48

Nm of torque. It has a wheelbase of 2,012mm and has a 7-inch infotainment system, customisable UI and multiple connectivity options. Pre-booking for the Strom-R3 are expected to begin this month.

Hap2Phone haptic display

French startup Hap2U demonstrated their Hap2Phone display that utilises a piezoelectric layer atop the screen to provide haptic feedback. Users can feel simple textures such as outlines and lettering on the screen. It can also come as a boon for the visually challenged. There's no word on whether smartphone manufacturers will be picking up the device anytime soon but the device opens up a whole new dynamic in the world of human machine interaction.
