Oppo smartwatch in works

Reportedly, Oppo will come out with their first smartwatch this year which will have an ECG function. <https://digit.in/feb20-72>

Logitech G Pro

Excellent microphone and impressive build

Unlike a majority of gaming headsets these days that are designed for flamboyance rather than function, the Logitech G Pro ditches theatrics such as RGB/LED lights and over-the-top design and build. They are an unassuming pair of headphones, but have a lot going on under the hood. Let's see if the Logitech G Pro owns the 'Pro' moniker.

Build and design

As mentioned above, the Logitech G Pro does away with RGB and aggressive design, and focuses on looking more premium and sophisticated. More 'Pro', if you will. The headband is made out of a leatherette material and aluminium forks hold the earcups in place. The memory foam in the headband and earcups feels plush and comfortable, however, after about 6-7 hours of continuous usage, the top of the head feels a slight hotspot. The build, while premium, may feel like a bit bulky weighing in at a whopping 320g.

The earcups are all black and silver with the Logitech G logo smackd right in the centre. The radial design here is quite eye-catching and all the materials go together very well to create a holistic, premium look. Clamping force is quite tight and for bigger heads, this might get uncomfortable after hours of usage.

The detachable microphone fits into the left earcup. The 2m long cable connector comes with an inline controller which features a volume wheel as well as a toggleable mute button.

Features

While the headphones themselves don't have too many features on the surface, apart from the easy-mute button, volume controls, and cross-platform compatibility, the Logitech G Pro has a host of features accessible via Logitech's G Hub software. Unfortunately, these don't have Blue Vo!ce technology like the G Pro X model. Still, the G Hub software

has tons of features. Gamers can find, utilise and customise pro players' profiles. All these profiles can be saved to the external USB sound card provided in the box. So, users can access their 'perfect' sound no matter which PC they're utilising to game. The software also has tons of other features such as a high-pass filter which removes low-frequency sounds and a de-esser which takes care of hisses and other high-frequency sounds that bother gamers. It also has sliders for volume and microphone in the acoustics tab. Here, you can also turn DTS Headphone: X 2.0 spatial surround sound on or off, according to your preference.

Performance

The sound quality of the Logitech G Pro (2019) is quite competent. Featuring PRO-G 50mm drivers, this gaming headset does quite well across different genres of games. The overall sound profile is clear and precise, however, the bass response is relatively under-exaggerated. We played FPS games such as Far Cry 3 and found that environmental sounds were beautifully rendered but the sound of gunshots and enemy footsteps lacked punch. The soundstage,

on the other hand, was expansive giving users a more immersive experience overall. Footsteps and gunshots are spatially-aware.

The microphone, despite not having Blue Vo!ce, is stellar. It filters background sounds in your vicinity excellently and the user's voice is picked up and relayed with precision. You can easily pick up the Logitech G Pro and use them effectively to stream with. Yes, they're THAT good. However, one gripe we had was that at higher volumes, the sound bleeds from the earcups. This, in turn, gets picked up by the microphone and your teammates will likely be able to listen to the tunes you're playing or the content you're watching.

Other than the gaming performance, the music reproduction is slightly lacklustre. The bass is muted and the highs can get slightly tinny in tracks such as *Popular Monster* by *Falling in Reverse*. We'd suggest that you tune the EQ on the G Hub software to your liking.

Bottomline

The Logitech G Pro (2019), priced at ₹9,995, is a solid gaming headset that gives gamers access to tons of customisations. Additionally, the build quality is also stellar, since the G Pro lets go of theatrics and solely focuses on quality. They're robust, feel good in hand and have adequate cushioning in the headband and earcups. The microphone is superb, however, if you want to take it to the next level, we suggest getting the G Pro X with Blue Vo!ce technology. Overall, the Logitech G Pro is a solid upgrade over the previous G Pro headset and serves as a capable gaming headset for pro and casual gamers alike.
