

There will be no POCO F2

POCO has confirmed there will be no POCO F2, but this does not mean that there will never be a Pocophone F2. <https://digit.in/feb20-55>

Super hot planet

At 7,800 F, exoplanet KELT-9b is so hot that it tears apart the molecules that make up its atmosphere. <https://digit.in/feb20-56>

NEED A CARD?

Agent001 has a simple recommendation guide for your next graphics card upgrade.

Agent001 | agent001@digit.in

T

here were a couple of recent graphics card launches and that obviously spiked up the number of people

reaching out to us over email and on social asking for recommendations or reviews or if they should bother upgrading their existing rigs to make the most of the new cards. So let me clear that up for you folks thinking of going down the same road.

If you have tonnes of money then you can get a flagship RTX 2080 Ti which starts from ₹79K for the cheapest reference design partner board and can go up to ₹130K for some of the exotic looking ones with a brick

for a cooler. AMD has the Radeon VII in the high-end segment but stocks are severely limited and the RX 5700 XT is a better choice, if you want to stick with AMD. Instead of classifying the cards as high-end, mid-range and entry-level on the basis of arbitrary metrics, I've decided to put down the resolutions for which they are good for.

These cards are sorted on the basis of gaming performance so depending on what your budget is, you can figure out which card would let you game the most. Obviously, you can make even the entry-level cards last for many years by dropping the video settings within games in a

mindful manner. The accompanying software with graphics cards, be it NVIDIA's GeForce Experience or AMD's Radeon ReLive, have similar features which will intelligently configure your graphics settings or even dynamically alter the resolution mid-game to give you better FPS.

Speaking of drivers, AMD's drivers get a bad rep for their instability and even NVIDIA have had a few

problems of recent times. Unless I run a side-by-side comparison of different scenarios, games, benchmarks and other day-to-day operations, I can't say which is better and which isn't. Ideally, you should check the release notes to get a better idea.

RESOLUTION 1440P - 4K

Price ₹34K-79K

- NVIDIA GeForce RTX 2080 Ti
- NVIDIA GeForce RTX 2080 Super
- NVIDIA GeForce RTX 2080
- NVIDIA GeForce RTX 2070 Super
- NVIDIA GeForce GTX 1080 Ti
- AMD Radeon RX 5700 XT
- AMD Radeon VII

- NVIDIA GeForce RTX 2070
- AMD Radeon RX 5700
- NVIDIA GeForce RTX 2060 Super

RESOLUTION 1080P - 1440P

Price ₹15K-26K

- AMD Radeon RX 5600 XT
- NVIDIA GeForce RTX 2060
- AMD Radeon RX Vega 64
- NVIDIA GeForce GTX 1070 Ti
- NVIDIA GeForce GTX 1660 Ti
- AMD Radeon RX Vega 56
- NVIDIA GeForce GTX 1660 Super
- NVIDIA GeForce GTX 1660
- AMD Radeon RX 5500 XT 8GB
- AMD Radeon RX 590 8GB
- AMD Radeon RX 580 8GB

RESOLUTION 720P - 1080P

Price ₹5.3K-13K

- AMD Radeon RX 5500 XT 4GB
- NVIDIA GeForce GTX 1060 6GB
- NVIDIA GeForce GTX 1060 3GB
- AMD Radeon RX 570 4GB
- NVIDIA GeForce GTX 1650 Super 4GB
- NVIDIA GeForce GTX 1650 4GB
- NVIDIA GeForce GTX 1050 Ti
- AMD Radeon RX 560
- NVIDIA GeForce GT 1030

NEED TO HAVE A CARD

₹2.3K

- NVIDIA GeForce GT 710

Disclaimer: We've excluded a few cards here due to lack of availability.
