

Tinder Panic button

Tinder is employing a new feature, a "panic button", to help protect users on the platform when they meet-up. <https://dgit.in/feb20-49>

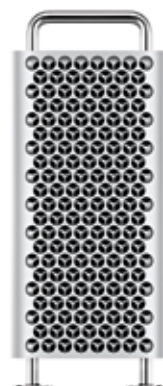

The new MS Edge

The new Edge runs on the same engine that supports Google Chrome and supports all Chrome extensions. <https://dgit.in/feb20-50>

Three-fan array

The three fans are held in place to the logic board with six screws and connects along with spring contacts. The whole triple-fan module comes out conjointly. These three tower fans suck in cool air through the 'cheese grater'-like holes and move it across the logic board through multiple heat sinks. After this, the blower fan pushes all the hot air out the back.

Mac Pro
(2019)

Modular components

Many modules can be accessed without tools, and those which require tools utilise standard screws and connectors. Additionally, step numbers (for repairing certain modules) and other guidelines are present on the device itself. Modules such as the I/O board, video card and power supply are all easily removable. While the SSD is modular as well, it is proprietary, which means you cannot repair it outside of Apple.

The CPU and a surprise module

There's a tiny little module present between two groups of DIMM slots which actually is the speaker inside the unit. The Intel CPU is located under its heat sink and is fixed in place using some T15 Torx Plus screws. Once the unusually large logic board is released from its place, you can see a variety of chips on both sides, which includes the Intel Xeon-W processor.
