

China to ban single-use plastics

As one of the largest consumers of plastics, China announced a policy to ban single-use plastics by 2025. <https://digit.in/feb20-03>

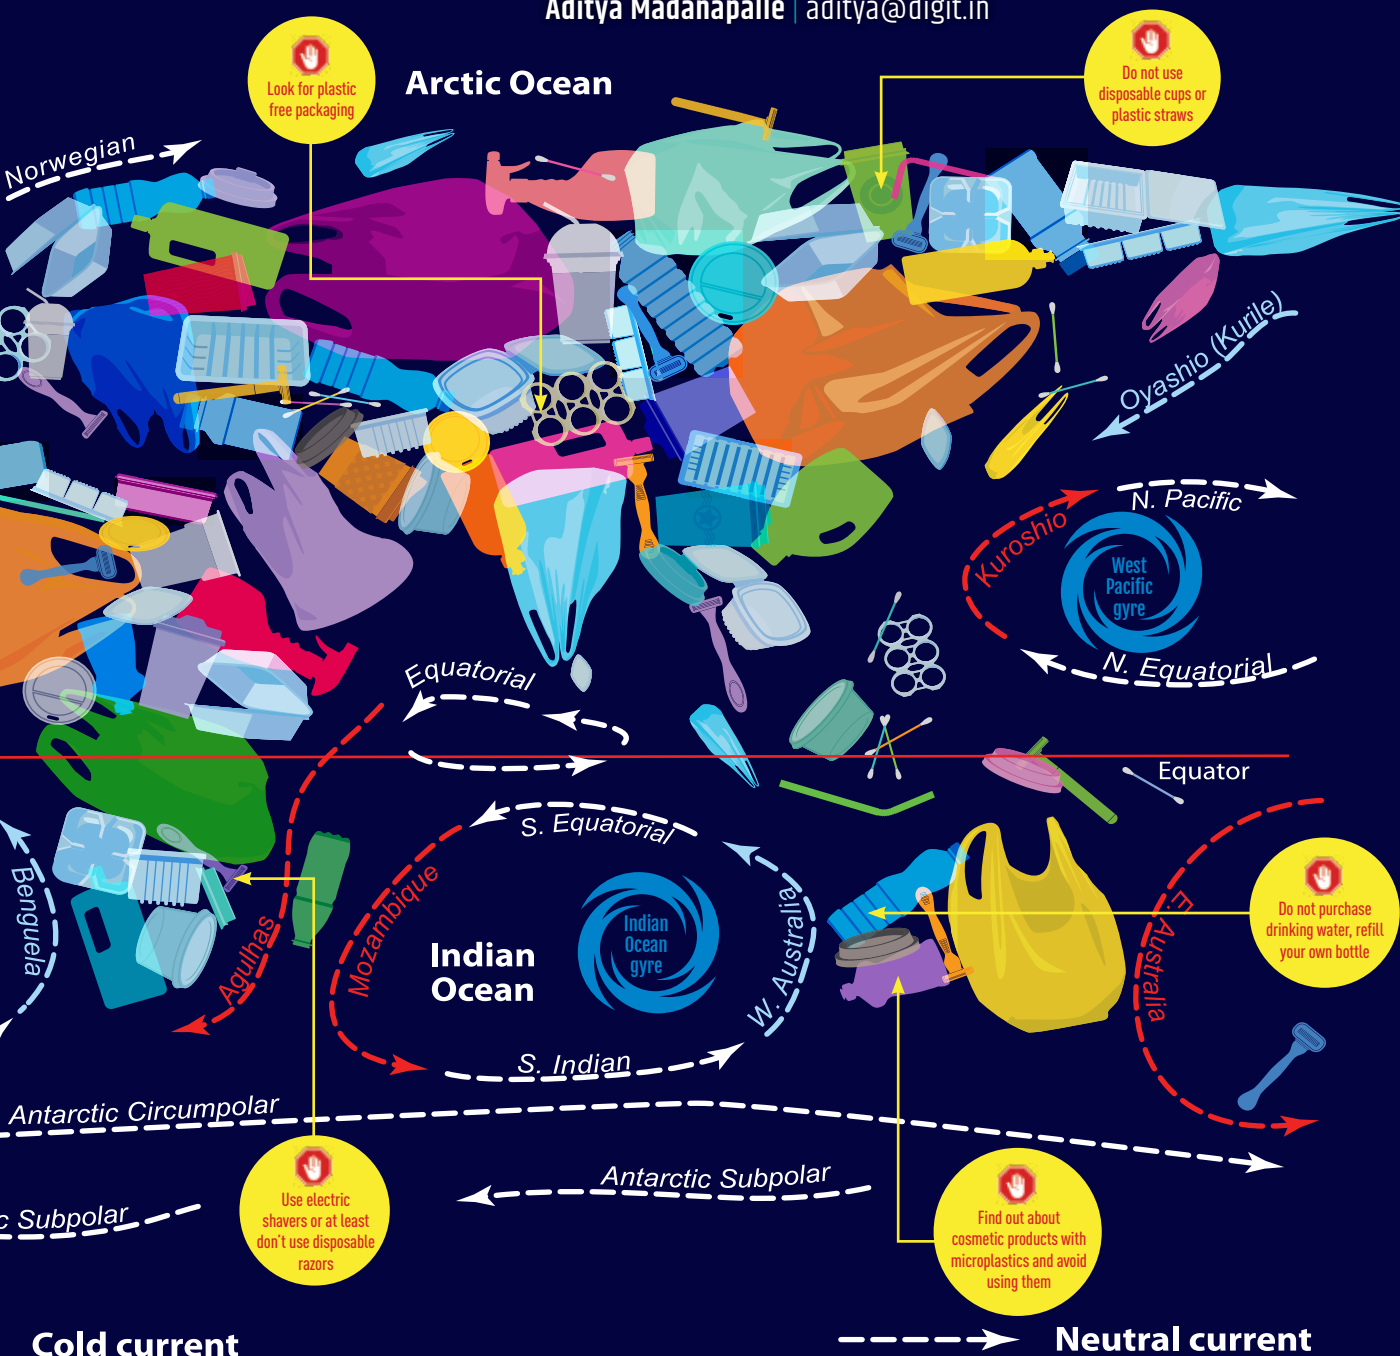

Turning plastic into fuel

A couple from Chennai have developed new tech that turns plastic waste into a low-cost fuel. <https://digit.in/feb20-04>

Ocean plastics, along with industrial sludge accumulates around oceanic gyres. While the great pacific garbage patch is the most well known, there are similar accumulations in every ocean. The plastics accumulated here break up into smaller and smaller pieces, and enter the food chain. Contributing to the problem are microplastics used in cosmetics that are dumped into the sea without any processing or filtering. Cleaning up this mess will require a lot of concentrated effort by world governments, and environmentalists are calling for a global treaty to control indiscriminate plastic waste "disposal" in oceans, that can take up as much as 400 years to disintegrate.

METHOD

Method cosmetics not only use natural ingredients without microplastics, but also use recycled ocean plastics in some packaging.

ADIDAS

Adidas Parley range of running shoes is just one lineup from the company to use ocean plastics.
