Hey there!

Just finished reading this mag and boy, it was awesome. Especially the cover story was fabulous. I'm currently in Class 10th and it has 'enlightened' me with regard to my future prospects. So, great work!! Anyways, this year's CES has just finished and I am sure you guys would include some serious sh*t in these mags which everyone will surely like. I hope that you provide an insight for all the cool, dope products launched in CES and determine if it is actually useful or just a gimmick.

Say hello to Mithun! Tell him I read his and Robert's articles first without fail cuz they are pretty deep! Peace!

—Nimit Khandelwal

1. How do you guys write so well? It's really amazing how you keep anyone hooked onto the magazine for hours. Any ideas how I can do that on my future blog.
2. Topics ideas. How do come with topic ideas? Those eye catching title and topics. I don't know what type of content I should put on my website related to coding and tech. Cheers,

Milan

Everyone wins
the mystery gift
this month!

Thanks for your feedback Nimit. You will find a lot of CES coverage in the mag, and of course, even more on digit.in, especially in the form of video, and even 360 degree video that you should try with a VR headset if you have one.

—Mithun

Hello digit, I'm Milan. I have been reading digit for 1.5 years now. Got to say, all of your posts are really amazing. Found out that digit is among top 10 tech magazines in the world!

I am thinking about starting a coding blog in the next few months. So I have a few questions regarding the content:

Hi Milan, thank you for writing in.

Thanks for being a regular reader. Your questions may be short, but they require seriously complex answers!

Honestly, we're not sure where we stand on the world stage, and not sure we even care, really. All that matters to us is that we're #1 in India, and have always been #1 in India since the very first month we started. That's always been what's driven us every day.

Thank you for the compliment about our writers. Indeed I too think Digit has some of the best technology writers in India, which is why they're always getting

Can you guys please make the colour of the font you use on mobile site black? Why would you choose grey font??? I can't even see what's written in it.

—Mukund Bhardwaj

Hi Mukund, thank you for pointing this out. While we do test our site on multiple popular mobiles, there will always be some discrepancy involved. You're right of course, while our attempts are always to make things more readable (especially on mobile), this is a very subjective thing.

We will try and make the font a little darker so that it looks better on more devices...

—Robert

Hi editor, I kindly request to include Fasttrack on Cloning a hdd, ssd etc., and taking backup of all device drivers & softwares on Microsoft & Linux OS. Fasttrack to making your old crt monitor touch screen monitor.

—Arnab Chatterjee

Hi Arnab, we don't think the topics you have suggested are Fast Track topics, but we can certainly write workshops on some of those in the future. Keep an eye out for them!

—Mithun
