

## LEARN HOW TO THINK RIGHT, IN ORDER TO BE ABLE TO FIND SHORTCUTS OR SOLVE ANY PROBLEM YOU FACE AT WORK OR AT HOME...

Robert Sovereign-Smith | [robert@digit.in](mailto:robert@digit.in)

**T**hink about how easy it is for you to read this sentence. You didn't think about it; you just read it. Even if English is your second language, the fact that you're reading an English version of this article suggests a level of proficiency that's capable of easily understanding everything that's said here. This article will attempt to get you to learn a new language, of sorts, in order to improve your life drastically.

Whether at work, or even at home or when having fun with a hobby, there is something to be said for being efficient. Unless you're sitting in a boat looking to spend a lazy day fishing, or sitting under a tree in a public park, reading a book and passing your time, pretty much every other task that has a goal can benefit from speeding things up. Whether it's a shortcut you find, or a way to do a task faster, or even a new

method that is more efficient, speed is desirable. And it's not only about going faster... you might find that you can improve the quality of output by using little tricks, or find a new way to do something that takes much longer even, but results in a bump up of quality... you can always improve in some way or the other.

Now, leisure is not something we often want to improve on, but we certainly do want to do that at work. The problem is, every one of us has such a different job description, and in so many different verticals, that it is impossible to nail this down to specifics. This is why all "self-help" books are vague and barely scratch the surface of any one job.

Besides, it's not just jobs that are different, it's people as well. No two people are the same, or do a job the exact same way, even if they hold

the exact same position, in the same company, with the exact same tasks set out for them to accomplish. There will be noticeable differences in how they go about doing their work, and this depends on their personality, and their way of thinking. What works for you will not work for your colleague, and this is why it's usually impossible for us to tell you how you can be better at a task.

### IT'S YOUR BRAIN!

You, however, have the luxury of knowing yourself, and are even sometimes capable of accepting honest feedback from yourself about what it is you suck at. More often than not, unless you're deluded about your own abilities, you will know your own shortcomings, and even if you don't your bosses will be only too delighted to critique you. It is your brain, and you're the only one inside it (schizophrenic patients might disagree), which means it has to be you to fix it. How on earth can you fix something that you didn't think was broken to begin with? Most of us think there's nothing majorly wrong with us, and
