

CUSTOMISE THE WEB

BROWSERS ARE YOUR WINDOW TO THE WORLD, SO WHY USE THEM IN STOCK MODE?

Manish Rajesh | manish@digit.in

Your web browsing experience is something you can easily customise and personalise to your own taste. Pretty much everyone who uses web browsers is already aware of browser extensions, but there's plenty of other ways you can go about tweaking your browsing experience. You can create a personalised version of whatever browser you're using that's finetuned for your own personal perusal of the web.

EXTENSIONS

Extensions are the most obvious thing to start with when it comes to customising your browser. Every browser has its own vast library of extensions/add-ons.

You name it, and there's probably an extension for it. Right from enabling dark mode or night mode for your entire browser, to the very obvious ad blocking, and the popular grammarly for auto-correcting, the list is endless. Finding the best extensions

for whatever browser you're using is incredibly easy, in addition to each browser's extension "store" automatically recommending the more popular extensions, you're simply one search away from finding the best extensions for your particular browser.

Remember that extensions are basically additional programs that

of code, usually JavaScript, which you store on your browser as a bookmark. But they don't function like traditional bookmarks, calling on these bookmarks runs the code allowing you to use additional features while browsing. In terms of functionality, they're only slightly behind extensions in how much they can offer you. Their

are running alongside your browser. Having too many running at the same time will definitely slow down your browser's performance.

BOOKMARKLETS

Bookmarklets are basically small bits

usability is usually limited to web-pages themselves, and not the browser, meaning you can't alter stuff like tool and menu bars like extensions can.

Let's take the "Show Password" Bookmarklet as an example. It's a bit old, but it essentially functions as the
