

In the 1960s, George Land and Beth Jarman conducted a series of tests to check the creativity of children at 5, 10, 15 years of age. The test adminis-

Just about the best smartphone app for young kids to get into programming is ScratchJr, which is based on the Scratch programming language developed by MIT, especially to help get kids into programming. Scratch is a kid safe social network that allows students as young as 8 to create interactive stories, games and animations, and share them with others. ScratchJr makes the same capabilities accessible to even younger children, ages 5 and up. ScratchJr also uses the tried and tested colour coded jigsaw block approach for teaching coding, and is available on all stores for free. The kids can import their own images, and also record their own sound effects for their creations. For iOS users, a particularly good app for kids is
