

SUPERDROID

TURN YOUR ANDROID UP TO MAX

Dhriti Datta | dhriti@digit.in

It can be easy to be restricted to using only what your Android smartphone offers you on the surface. And, for good reason. Smartphones powered by the open-source Android operating system are extremely powerful machines and their evolution since their inception is nothing short of astounding. On the surface, Android smartphones offer users nearly everything they'd expect from a smartphone today. Remotely catch up with your long-distance family and friends? Check. Play immersive games with exceptional graphics? Check. Order food, clothes, and groceries online? Check, check and check. So, the list goes on...

However, if you crave to be an Android power user who tinkers with intricate nuances when it comes to the piece of tech you're holding, Android offers you plenty of room for that too. Its open-source, highly-customisable nature not only enables this, but encourages it. Android devices give users the power to access the underlying technology directly, and tinker with them to their heart's content. Endless customisation is something that Android offers to its users, and this extends beyond the UI. However, venturing into such customisations can be slightly daunting. Nevertheless, even if you have passable tech knowledge, you can get down and dirty with Android.

AUTOMATE SENDING RANDOM 'GOOD MORNING' MESSAGES EVERYDAY

Have an SO (significant other) to whom you meticulously send 'good morning' or 'good night' messages everyday? Why face their impending wrath if you accidentally forget to do so one day? Just automate it. Android has tons of powerful apps, such as Tasker, IFTTT and Automate, which can help you regulate a variety of tasks without so much as raising a finger. In order to send automated, 'good morning' messages, our weapon of choice was Tasker. With this app, you can enter numerous renditions of good morning messages in a .txt file and
