

LG Indoor Gardening Appliance

L

G is all set to launch its very first indoor gardening appliance, which they showcased at this year's CES.

The appliance doesn't yet have a name but the idea is to basically grow your own veggies at home. Home gardening is not exactly a new thing, a lot of people have rooftop or backyard gardens already. However, not everyone has or can afford houses or apartments with room for gardens. That's where this appliance comes in. LG's indoor garden appliance is a modular refrigerator-like structure in which

you can grow your veggies. The machine is able to simulate outdoor conditions via time-sensitive LED lighting, air circulations and water control.

This makes the whole planting and maintaining process incredibly easy, where all you need to do is plant the seeds and simply keep an eye on things through the device's app. According to LG, even a complete novice at gardening can grow a garden with this device.

The indoor garden packs enough room for a total of 24 seed packages. According to LG, that's enough to sustain a family of four. Imagine that, once you have this thing up and running in your house, you won't need to have to visit the vegetable market anymore. Save for maybe the more exotic stuff. The appliance doesn't have a name yet, nor do we have a price.

Kohler Moxie Showerhead

A

rather uncommon combination, but not an unwelcome one, the Kohler Moxie Showerhead is a smart speaker that's built into a showerhead. What's more, there's also an Alexa-enabled version of this smart showerhead.

That's right, all the features you'd expect from Alexa, including your favourite playlists, accessible right in the shower. But that's not all, running out of shampoo? Just tell Alexa to remind you to buy some, or even better, get Alexa to buy some for you online.

Getting to the infrastructure, the Moxie Showerhead is very smartly designed. The shower itself is simply a ring with the speaker slotting snugly in the centre of the ring where it attaches magnetically. The device comes with a cordless dock for charging. The Moxie Showerhead has two versions, one is a simply a Bluetooth speaker, which will retail for \$99. The other version will feature Alexa as well, and will retail at \$159.

The speakers can run for up to six to seven hours on a single charge, which should be more than enough for about a week's worth of showering. We hope you don't spend longer than an hour a day in the shower. Also don't worry, it's all obviously waterproof, equipped with an IPX67 rating.

Kohler's Moxie Showerhead will be available to purchase sometime later in 2020.

Bosch Virtual Visor

A

nybody who's driven a car during the day has faced this issue at least once. Sun glare. To combat this, most vehicles nowadays come with sun visors. Over the years however, there haven't really been many changes in the sun visor department. Then again, to be fair, sun visors do their job pretty well. Bosch however aren't satisfied, and have come up with a high-tech solution for sun glare that will help drivers avoid any and all sun glare.

The Bosch Virtual Visor, which debuted at CES this year, is a transparent LCD screen with an RGB camera that sits inside the vehicle cabin. This camera tracks the sun shining on the driver's face. It does this using AI, which locates the driver's facial features and detects shadows falling on them. Using a patented algorithm, the camera pinpoints where the driver's eyes are and darkens sections of the Virtual Visor (LCD screen) to block out the sun. No glare? No problem, the Virtual Visor goes back to being transparent.

In addition to being way cooler than conventional sun visors, the Virtual Visor is also safer, eliminating the need for drivers to take their hands off the wheel in order to open or close their visors manually.
