

Belkin Boost Up 10W Qi Wireless Charger

The Belkin Boost Up 10W is a speedy little Qi wireless charger for every Qi-enabled device out there. The charging pad itself can deliver upto 10-watts for fast charging, however, iPhones can only utilise 7.5-Watts, Samsung Galaxy devices can utilise 9-Watts while Sony, LG and a few other manufacturers' models can utilise all 10. Unfortunately, Google Pixel devices only charge at a standard rate of 5-Watts. Nevertheless, for a wide array of Qi-enabled devices this is a step up over the standard 5-watt wall chargers typically provided. The charger was able to top our Samsung Galaxy S10 Plus test device from 5 per cent to full charge in a span of 3 hours and 45 minutes, which meets expectations. The Boost Up 10W charger also meets Qi wireless charging standards as set by the Wireless Power Consortium. The company also claims that the wireless charger ensures that it does not interfere with any phone functionality while charging such as battery life, touchscreen, Wi-Fi, Bluetooth and more. We didn't come across any issues with the phone's typical functions during our testing phase. The charger comes equipped with rubberised stabilisers at the bottom to ensure that it doesn't get knocked over a surface or moved easily. A micro-USB cable needs to be plugged in the charger which then plugs into a wall charger or a USB port to initiate charging. There's also a tiny LED indicator which lights up when the wireless charger is powered. To add to this, the charger can also detect foreign objects such as keys, coins and other items. It immediately stops radiating any power when it detects a foreign entity. You can also use this charger seamlessly despite having a cover or case up to 3mm in thickness. We tried it with our basic plastic case and it worked just fine. Additionally, what makes this purchase even more lucrative is the (up to) 3 years warranty. You get a 2-year warranty by default and can add an additional year by simply registering your charging pad at Belkin.com. The company takes it a notch higher and also includes Connected Equipment Warranty up to \$2,500 in case any of your Qi-enabled devices get damaged while charging them on the Belkin Boost Up 10W wireless charger.

Belkin RockStar earphones with Lightning connector

The RockStar earphones with the Lightning connector are a sturdy, well built pair. The eartips are soft, and there are three size versions available for the perfect fit. While the housing does protrude quite a bit, the earbuds are lightweight and you will not actually feel the weight at all. Additionally, the drivers are angled inwards, which makes the parking great. These are extremely comfortable to wear for long periods of time. The 112 cm cables are just the right length, suitable for walking or running, but not too long if you are just sitting. The cables themselves are flat, a design that Belkin uses to prevent tangling, but we found that on a few occasions, the cables do get tangled. However, unravelling them takes less than ten seconds, so we are extremely satisfied with the design and build quality. The headphones sound great too, with just a bit of detailing missing in the lower frequencies.

The mids and highs are spot on, which makes for crystal clear voice calls. Podcasts sound great too. The noise isolation could have been better though, and the headphone does not really prevent external noises by much. This can be a problem during extremely noisy commutes. The model is MFi approved. However, the device suffers from a problem with almost all the Apple accessories, including official Apple ones. The lightning connector keeps randomly slipping from the lightning port. At times, it will not slip out entirely, but just a little bit, which means you have to push it back in, or remove it and push it back in. This can be problematic if the device is in your pocket, and especially problematic if you are using the headphones in the dark. We blame Apple for this though, and not Belkin. These are a solid pair to invest in, even though they are more expensive than the official Apple lightning earphones. The earphones come with a two year warranty.
