THIS MONTH IN TECH:
This month, we give you
some tips and tricks for
Snapseed and Insta stories,
learn about securing
your web app in devworx,
we'll tell you how to install
the Android 11 developer
preview and much more

Reddit CEO calls TikTok "fundamentally parasitic"

Reddit CEO and co-founder, Steve Huffman, called TikTok as being "fundamentally parasitic" because the app was always listening and that the fingerprinting technology incorporated into the app was, in his opinion, truly terrifying. In a response to TechCrunch, TikTok called it a baseless accusation made without a shred of evidence.

WHAT'S NEW

Tesla six years ahead of Toyota and VW

Nikkei Business Publication performed a teardown of the Tesla Model 3. Apparently, the way Tesla designed its central control unit gives it an edge over major car makers because matching what Tesla has done will take about six years. It's not just the tech, rather the supply chain cultivated by car manufacturers over decades which would be rendered obsolete. Tesla maintains strict control over the tech in its central control unit as well as the manufacturing part. Major car companies work with hundreds of different partners to source individual components and overhauling the entire supply chain including that of their partners' would take time and investment. The

traditional car manufacturers certainly have the resources to move everything in house and compete with

Tesla but that would mean that all their partners which rely on these car manufacturers will be out of business. Tesla makes the ECUs, the Central Control Unit and batteries of their cars so they don't have to rely on partners for the core components of their cars. As a result, Tesla can innovate at a much rapid pace compared to traditional car manufacturers.

Major tech conferences cancelled over COVID-19

The uncontrolled spread of COVID-19 is prompting organisers of major conferences as well as the participants to reconsider. After several participants pulled out of MWC 2020, the organisers GSMA announced that the show was cancelled for this year. In a similar vein, GDC 2020 has seen major game studios, publishers and technology companies pulling out. Even the city of San Francisco has declared a state of emergency to ensure

all services are kept on high alert. These two factors are raising concerns that GDC 2020 could be cancelled. Meanwhile, Facebook has announced that their annual developer conference, F8 has been cancelled. All scheduled announcements are going to

be released online along with a livestream. The next major tech conference is COMPUTEX 2020 and organisers have maintained that it will go ahead with necessary precautions being taken. Still, it's a little early for partners and participants to issue updates. While the announcements at technology conferences can easily be moved online, there are events such as the Tokyo Olympics which have no alternatives.
