

Apple's first India store

Apple will be opening their first ever India store in 2021, they will also launch an online store for India. <https://dgit.in/mar20-67>

Samsung Galaxy Z Flip sold out

The Samsung Galaxy Z Flip went up for pre-order at 11am within a few hours was sold out. <https://dgit.in/mar20-68>

Samsung Galaxy Note10 Lite

Unique but handicapped

The Samsung Galaxy Note 10 Lite is a sign of Samsung coming around to the inevitability of a value flagship. Samsung is targeting young creators, artists and entrepreneurs with the Note 10 Lite. Let's see how it fared.

Design and display

Samsung went ahead with a tried-and-tested formula. A flat AMOLED display with a punch-hole camera and a gradient exterior. The camera module at the back sits flush with the body but the shape is a bit unappealing.

The Note10 Lite gets the regular Super AMOLED display stretching 6.7-inches with FHD+ resolution. It has a 60Hz refresh rate and comes with HDR certification. The Note10 Lite's panel manages to hit 554 lux outdoors and 2 lux indoors which is decent enough.

Performance

The Galaxy Note 10 Lite runs on a 2-year-old Exynos 9810 processor. The benchmark numbers show this processor's age. In every benchmark app, the Galaxy Note 10 Lite scored lower than the OnePlus 7T. In real world usage though, the device is not all that bad. UI actions still feel smooth and fast. There's hardly any waiting while launching apps as well.

It's the S-Pen that differentiates the Note 10 Lite from all other value flagships. The S-Pen can be used for most of the functions as in the more expensive Note series, including taking notes, taking photos, selecting text and drawing AR emojis.

In gaming, the two-year-old processor was quite capable of handling heavy-duty games. Both PUBG Mobile and Call of Duty ran with high stability, but it couldn't hit the peak frame rates.

Software

OneUI is presently one of the best-designed custom interfaces for Android.

You have the full suite of Samsung Knox security features with the Note 10 Lite along with Samsung Pay. The Samsung software experience is what sets these flagships apart. Right down to the customisations of icons, widgets, window sizes and more. What you don't get is a DeX Mode that Samsung refreshed with the latest Note 10 Plus.

Battery life

The Note10 Lite is powered by a 4500mAh battery. The battery drain on standby is minimal but after 15 minutes of CoD: Mobile, the battery dropped by a good 6 per cent. Similarly, 30 minutes of streaming content on Amazon Prime Video dropped the battery by 5 per cent. These are conservative numbers that do convert over to a day's usage. The Note10 Lite tops up with a 25W fast charger. The S10 Lite also supports 45W fast charging but still only gets a 25W charger in the box.

Camera

The Note 10 Lite's camera setup comprises of three 12MP cameras – primary, telephoto and ultrawide. Photos from the primary camera are a delight to see. However, dynamic range

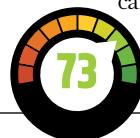

is slightly lacking. It also features a dedicated night mode. The brightness and dynamic range are pretty good here.

The ultrawide lens is pretty awesome. Provided the light is optimum, photos from the ultrawide lens also look similar to those from the primary lens.

Using the telephoto lens, you won't get good results after sunset but otherwise, the lens does well to capture faraway subjects with good sharpness. The portrait mode offers two modes to shoot with. One with a wide view and another at 2x zoom. Both modes are able to produce decent portraits. The 32MP selfie camera also comes with portrait mode, slo-mo video but no night mode.

Selfies are given extra beautification treatment by default, but you can turn it off.

Videos shot from the phone look far too over-processed. Samsung maybe applying a high amount of interpolation to achieve shake-free 4K videos.

BUILD AND DESIGN.....	75
PERFORMANCE.....	78
FEATURES.....	62
VALUE.....	71

Bottomline

Cutting corners in the build quality and hardware is how Samsung was able to bring the Note10 Lite's price down to compete with the value flagships. The S-Pen is what makes this unique in this segment, but the old processor acts as a handicap. Still, it is a consistent performer. Then again, don't expect the Note10 Lite to complete tasks as fast as say, the OnePlus 7T or the Realme X2 Pro.
