

Jabra Elite 75t

Bountiful upgrade with a few misses

Ever since the release of the Apple AirPods, audio companies have been vying to create competent alternatives. The Jabra Elite 65t was considered one of the most worthy rivals to the first-gen AirPods, and now Jabra has released a follow-up pair of true wireless earphones, the Jabra Elite 75t. Let's see how these earphones fared in our review.

Build and design

The design of the Jabra Elite 75t has seen a considerable overhaul from the 65t. Jabra has shrunk the earbuds as well as the charging case by about 20 per cent.

Jabra also slashed down the size of the microphone stem on the earphones and made the earbuds less bulky. The result? These bulge out of the ear considerably lesser and are lighter. The 45-degree angled nozzles aid comfort and fit even further.

Coming to the physical buttons on the earbuds, they are easy to find and press. They allow you to perform numerous music playback or call functions such as pause/play, track seeking and summoning the voice assistant. Unfortunately, the press and hold command for volume levels eradicates any level of granular control over the volume.

The charging case sports a matte-black finish with 'Jabra' etched into the front. The rear side of the case houses the USB Type-C charging port and an LED battery indicator. Overall, this is one of the most pocketable true wireless earphones charging cases we've tested.

Another great upgrade is magnets! The charging case now comes equipped with magnets, unlike its predecessor.

Features

The Jabra Elite 75t skips Qi wireless charging support and ANC. Nevertheless, we are still giving Jabra an out here since the passive isolation is nothing short of excellent. It also misses out on touch controls, but we actually prefer

the physical buttons on the Elite 75t over the touch controls on a few true wireless earphones.

Let's get into the good stuff. The earphones come with IP55 water and sweat resistance. The battery life has seen a noteworthy boost. It promises a whopping 7.5 hours of playback on the earphones and a total of 28 hours with the charging case. We recorded a playback time of 6 hours and 15 minutes at 60 per cent volume.

The earbuds do miss out on ANC, but they come equipped with a proficient HearThrough Mode. We had music playing at 60 per cent volume and could still hear the announcements, some conversations and sounds of cars, vehicle horns and more. The earphones can also be paired to the Jabra Sound+ app which gives users access to a cornucopia of features and customisations.

The Jabra Elite 75t earphones can also be used in Mono mode and it has an auto-pause/play feature as well. Additional features include Bluetooth 5.0, multi-call handling, multi-device pairing, and AAC and SBC (no aptX) codec support.

Performance

In contrast to the Jabra Elite 65t true wireless earphones, the Jabra Elite 75t has a more pronounced bass response. The overall sound signature is warm, crisp and quite detailed. They're not neutral in any way. The punchy bass

response is quite sonically accurate but could prove to be a bit boomy in certain tracks. The boosted lows and low-mids do mar the mids, where vocals and mid-ranged instruments fall prey to auditory masking, even though the mids are quite textured and detailed. Vocals sound a bit veiled in bass-heavy songs. This is apparent in *Hysteria* by *Muse*, where the drums audibly cloud the vocals. Also, the mids lack drive unless the volume is set at 60 per cent or above. The highs sound detailed. They are usually not tinny, but at higher volumes you can

hear some sibilance. Soundstage is restricted but the imaging and instrument separation is excellent. In crowded tracks such as *Selkies* by *Between the Buried and Me*, instruments are clearly rendered and there's no discernible overlapping. Microphone quality, as expected on Jabra products, is quite good. The earphones do a good job muting external sounds. One major gripe we have is the stability of the wireless connection. Despite having Bluetooth 5.0, these earphones are prone to the occasional lags and skips during music playback.

Bottomline

If you are looking for a premium pair of true wireless earphones that cost lesser than the Apple AirPods Pro, the Jabra Elite 75t is a great option. Equipped with excellent battery life, stellar passive noise cancellation, good audio performance and microphone quality, these earphones may be the perfect fit for bass lovers who also have an active lifestyle. Nevertheless, if you value features such as wireless charging, you may want to skip out on these earphones.
