Facebook has assured everyone that they will ban ads promising "cures" for Coronavirus. <https://dgit.in/mar20-38>

BUYING ADVICE**WILL I BE TAXED?**

Q Hi Agent001, I have composed this mail to ask you about a question that's been in my head for a long time. Well, you see, my class 10th boards will be over next month and I want to build a PC in the range of ₹45-55K just for moderate gaming. Now, I haven't decided about anything except the CPU and GPU which I had earlier picked as a Ryzen 5 3500 + GTX 1660 @ ₹26K (I will buy it offline). Now, recently when I was surfing through Amazon.com just for checking international prices of some parts (I was logged in with my Indian account) I found out that the Ryzen 5 3600 shipped to India with only \$9 shipping charges (There was no import fees mentioned whatsoever) which would bring its total cost to around 183\$. It was the same with the ZOTAC GTX 1650 super at only \$159 + \$11 shipping charges. During checkout, where both the card and the CPU was in the card, the overall shipping charge fell to around 12\$ for standard 9-15 days delivery. Now I just wanted to know if it is safe to order from Amazon.com and whether I will have to pay the import fees even if it's not mentioned there. Also which do you think is a better deal, the Ryzen 5 3500 + 1660 or the Ryzen 5 3600 + 1650 Super. I await your reply :)

—Anindya

Ryzen 5 3500

A Hey Anindya, Getting stuff from the international Amazon portal isn't going to be a problem as long as you stick to getting things from "fulfilled" sellers. Import taxes will be applicable if you are shipping anything to India. The tariff depends on the class/category and whatever is the declared value. Even items declared as gifts are subject to taxes. So while shipping is cheap, you will receive a mailer from the shipping agent when the product arrives in India for documentation regarding the product. They'll provide an estimate for the import duty and your product will only be cleared after you pay whatever amount is decided by the Customs Official. Then there's the question about Warranty being honoured internationally. Not all manufacturers will honour warranty on something that was purchased overseas. So it's better you speak to an AMD representative to see if International warranty will be honoured. ZOTAC only honours warranty in the country of purchase. As for your last query, for gaming, these two processors are very closely specced so

there will be barely any difference in performance. It's better that you opt for the higher specced GPU so a Ryzen 5 3500 + GTX 1660 would be the better option for gaming.

LAPTOP UNDER 35K

Q Hello Agent001, I am planning to buy a budget laptop under ₹35K by the end of March. I'll use it mostly for binge watching shows, browsing and giving test series. Please recommend what to buy.

—Abhishek Kumar

A Hey Abhishek, You can check out the ASUS Vivobook 15 X540UA or M509DA. One gives you an 8th Gen Intel Core i5 pro-

ASUS Vivobook 15 M509DA

cessor with 1 TB hard drive and no SSD whereas the other gives you a 3rd Gen AMD Ryzen 5 processor with 256 GB SSD and no hard drive. The latter will give you a much better user experience because of the SSD whereas the former will be a little sluggish given the slower storage. Obviously, the former gives you far more storage capacity compared to the latter. **A**
