

Oh Internet!

We decided to change the way we do these snippets above pages. This month you will find snippets with different tags (like the one on the left here), all celebrating the crazy world that is the internet. The tags are self explanatory, and give you a heads up about what you will find at each link. Enjoy!

FEEDBACK FOR THE FEBRUARY 2020 ISSUE

Dear sir, I really like the books you write as they explain things along with a sense of humour. Therefore, I am requesting you to write a dmystify on Artificial Intelligence and nanotechnology. Also on archaeoastronomy, if possible.

Thanking you sincerely,

—Rishitaa Pandit

compliment. However, dmystify is only for core-science-based topics, which is why we can't really include AI and Nanotechnology in the Fast Track booklet, unfortunately. However, we can certainly try and include archaeoastronomy though, or aspects of it, in our dmystify booklet. We will try and slot it into a topic that is already pending, or as a book on its own. Hopefully, we can do that in this calendar year.

Hi Rishitaa, thank you for writing in to us and thank you for the

—Robert

Hi Digit,

I really love all of your work guys, keep it going! 🙌 I just want to know if you people have written/ made any content such as reviews/ videos surrounding home theatre components such as screens, projectors, audio systems, etc. If yes, could you provide me with the links and if not, please do write some reviews or make some videos. It will really help me. Also, I would really appreciate it if you did some comparisons between 4K/8k LED TV & 4K projector setups. It will help me out a lot. Thank you for all the help!

—Hemant Verma

Hey Hemant, we do cover projectors and soundbars at Digit.

You can find some of these videos on our YouTube channel (<https://digit.in/381NsiH>). The Projector vs TV comparison is something we keep doing every few years to see if the status quo has changed and the time is ripe for us to revisit the topic given how both media consumption devices have evolved quite a bit over these last years. Stay tuned for such content, we'll get started on this right away.

—Mithun

Letter of the Month

Hi digit,

I recently finished reading the magazine it was amazing. Straight to the topic no bullsh*t. Mithun and Robert are the best openers of Digit providing sensible and deep info regarding current trends.

About CES coverage, you have covered most of the important content pretty well.. I liked the way you categorise the topics (Tech, Cult, Sci and Alt), and the best thing is the way you provide information even in the headlines. The ads placement is neat, no interruptions in between.

Dhriti ma'am, if possible could you please write regarding careers which have great scope in future in the next issue it would be helpful for the upcoming graduate students.. And thank you for providing environment awareness along with tech info it's helpful. Kudos to the creativity.

The add-ons, Fast Track helps to build skills & dmystify surprises with its content. I hope one day Digit will be like a Black hole from which no info can escape and emit the knowledge through the White hole (magazine) and shine like the Sirius of the tech industry! My only complaint is, can you do something about the 112 pages? It isn't enough..

—Sameer Fauzdar

Hi Sameer, thanks for writing in and for all the praise.

We're so glad you find our articles insightful. We did cover the top five tech careers for the future in the August 2019 issue. We will strive to do at least one such article every year where we cover the up and coming careers every year, so keep a lookout for that. As for the 112 pages, we wish we could do more every month, however, all our special issues (June and

December) are flooded with extra content! This is where we attempt to satiate hungry readers like yourself yearning to learn more about everything tech, sci, cult and alt :-)

—Dhriti
