

Internet of Trees

Internet-connected modules installed in forests detect temperature and humidity to check for forest fires. <https://digit.in/mar20-09>

Trees have their own internet

A study shows that trees can exchange large amounts of carbon via the fungal 'internet' connecting their roots. <https://digit.in/mar20-10>

alt

1000 WORDS

From the resilient trees that refuse to give up growing even in the toughest conditions, to trees famous for their seasonal variations, here are some famous specimens from around the world.
