

LOL

The trolls of Reddit

Visit this subreddit where the members actually attempt to troll science. Seriously weird and wacky stuff here: <https://dgit.in/mar20-23>

**AI spots online trolls**

New AI algorithms will monitor social media conversations and spot online trolling in the future. <https://dgit.in/mar20-24>

Apple's famous 'I'm a Mac' ad

picked the topic of privacy more than once. In fact, you could even check out Scroogled.com, if it wasn't currently defunct, to get a quick lowdown of Microsoft's opinion on user privacy for users of Google's services. In what was eventually said to be a leaked internal ad, Microsoft famously parodied Google's own for Google Chrome. While the Google ad showed how using Chrome on multiple devices can lead to a seamless, personalised experience, the Microsoft ad used the same visual style to portray Chrome tracking user data everywhere and monetising their personal information for their own profits. You can check out both the original as well as the parody video here: <https://dgit.in/Scroogled>.

REALME TROLLING XIAOMI – NO ADS

The rivalry between Chinese smartphone manufacturers Xiaomi and Realme has seen many forms

Yes, they even did merch

– some tongue-in-cheek, some Twitter slugfests. However, we're here to talk about the former. While both brands have repeatedly engaged in comparing their devices to each other's latest launches, during the launch of Realme 3 Madhav Sheth, Realme's CEO, took a particular dig at Xiaomi. At the end of the slide comparing the specifications of the device with the Redmi

Note 7, he added one more point – no ads in the UI. This was a clear shot at Xiaomi's introduction of ads into MIUI on some phones as a business model. Last year in July, Realme trolled Xiaomi once again when Sheth tweeted quotes from Xiaomi executives that praised the Snapdragon 710, the processor powering their newly launched Realme X. However, some of this hasn't aged well as Realme has since introduced ads into its own UI – although, it has been done as an optional feature.

XIAOMI TROLLING ONEPLUS – STARKLY SUPERIOR

India is one of the biggest smartphone markets in the world, and has multiple great companies competing for any kind of leadership in it. While OnePlus started off with the mantle of 'flagship killer' it has since moved closer to the pricing of said flagships, while brands like Xiaomi have gained lots of popularity due to their aggressive pricing and budget devices. This has also made OnePlus the brand to beat for any aspirational Android smartphone manufacturer. Xiaomi has trolled OnePlus multiple times during the launch of its K20 series. When OnePlus launched the OnePlus 7, Xiaomi didn't even

wait for 24 hours to congratulate them on social media for their latest 'flagship' – signing off the wish as 'Flagship Killer 2.0' with K and 20 highlighted in red. When OnePlus put up billboards with Robert Downey Jr, Xiaomi went ahead with billboards right next to it with the text 'Starkly Superior To The Latest One' – pulling no punches by referring to Downey's role as Tony Stark as well as using OnePlus' own font for the last word. They also weren't too fond of the fact that OnePlus claimed to be the world's fastest smartphone and responded

Xiaomi trolling OnePlus

with 'Somebody just announced the world's fastest phone'. No clues needed about that one.

ONEPLUS TROLLING APPLE – PREMIUM BURN

When Counterpoint declared OnePlus 6 the bestselling premium smartphone of 2018, OnePlus decided to go ahead and troll Apple. They posted this image on their social media along with the caption 'iDare you': <https://dgit.in/iDareyou>.

As you can see, the text asks Siri about India's No.1 Premium Smartphone, taking a dig at Apple which had reported a rare decline in smartphone shipments that year. A number of users on social media even responded with screenshots of actual responses from Siri highlighting news articles about the same findings from the Counterpoint report. However, you can say that Apple had the last laugh when the iPhone XR outsold every other smartphone in the world in 2019.
