

Disappointing S20 sales

The S20 lineup has sold only about 60% as much as the S10 lineup, thanks in part to the pandemic. <https://dgit.in/apr20-87>

Amazon "essential" shipping

Amazon's products are marked essential on the store, while competitors remain non-essential. <https://dgit.in/apr20-88>

BUYING ADVICE

MOBILE BUT NOT MOBILE

Q Hi, I am Shreyas Gupta. I am an avid reader of Digit. I have loved it since the moment i started reading it!! I am confused about a product... Here is my problem. I play Fortnite on my OnePlus 5T. I bought a controller from amazon (the name is Evo Amkette Gamepad 4). It works very well with my OnePlus5t via bluetooth.

Type-C to HDMI Thunderbolt cable

But the problem is that my mobile's screen is small, so I want to connect it to my TV. I have a Sony Bravia TV which is a little old. I tried casting but it is very laggy. So I am planning of buying this wire:

Farraige USB C to HDMI Cable Adapter (4K@60Hz) 6.6Ft USB Type C to HDMI Cable from Amazon.in. I'm not sure if it will work and my mobile will connect to TV via this wire. Please let me know ASAP so I can buy the wire to play Fortnite.

—Shreyas Gupta

A Hey Shreyas, That's a cable used for Thunderbolt. Thunderbolt allows you to mirror displays and extend existing ones aside from simple data transfer. For your use case, you either need your phone to be capable of MHL or you will have to get a DisplayLink dock which is compatible with your device. This cable alone will not get the job done.

WHICH GPU TO GET?

Q Hi, So, against the covid19 outbreak GTX is more or less cancelled (new cards will not be launched). I was waiting for new NVIDIA cards but since this is not happening what do you think Agent001?

Should I just give all my money and buy an AMD RX590 or wait for big Navi or NVIDIA RTX cards to launch?

Would the wait be worth it (like cryptocurrency wait) or would it be just like waiting for big navi last year?

I would not be able to upgrade my gpu in a looonngg time and since I have a GT 710 card I do not come in the " Hardware from last 2 year" category that you mentioned in your awesome article.

My budget is ₹20,000. I had to buy a new psu too (as my older one was an

iBall one), so that made the budget for graphics card ₹17,500. Also, I have an Intel Core i3-6100, will it benefit me to wait for new tech or will a newer GPU bottleneck my system even more?

So, please help me in my dilemma. Thanks in advance.

—Abhi

A Hey Abhi, A GTX 1660 seems to be right up your alley considering your budget. We really don't know when the new cards will be introduced in the market and whether the current global crisis will

ZOTAC GTX 1660 Twin Fan

end any time soon. Moreover, computer parts stores aren't termed essential under the Government regulations that are in force right now, so you might be forced to wait for your upgrade anyway. Coming to your question about the processor, if you do get the GTX 1660 then the Core i3-6100 with just 2 cores / 4 threads will be a bottleneck. Expect 10-30% less FPS compared to a 4 core / 8 thread CPU or better. Upgrading to a current gen CPU will require a new motherboard as well. That will be quite the investment. **A**
