

You can set up age-based and device-based restrictions

RESTRICT VIEWING WITH PARENTAL CONTROLS

If you've got little kids or teenagers at your home and you want to restrict the kind of content they're streaming on Prime Video, you can do so. Let's face it, streaming services have a slew of unadulterated content that may not be appropriate for all ages and Amazon Prime Video is no exception. Both, the mobile and web versions of Prime Video include various parental control features that allow you to keep track of what is being watched and block out inappropriate content as well. To access Parental Controls, head over to Settings on the app or website and then go to Parental Controls. Here, you will be prompted to set up a 5-digit PIN which will block anyone who doesn't have access to this PIN from watching certain content. You can choose Viewing Restrictions under the same

Parental Controls tab and set up age-based and device-based restrictions here.

IMPROVE YOUR PRIME VIDEO SEARCHES

The Search Bar on Amazon Prime Video is, frankly, a disaster. There are no filters at all and sometimes the suggestions that drop-down display shows/movies that aren't even present on the streaming service! Talk about raising expectations with false promises! Instead, you can try out JustWatch (<https://www.justwatch.com/in>), an online tool that lets users find streaming content across an array of streaming services. It also finds new content on these streaming sites and displays a list of the newly-added shows and movies. To search, you can go to the New or Popular tab where you will find the rather beefed-up search filter which allows you to set filters such as release year, rating and

genre. However, if you don't want to use an external service, you can simply type genre names into the Prime Video search bar, such as "Thriller" and the service will pull up TV shows or movies fitting within the genre.

EDIT YOUR WATCH HISTORY AND WATCH NEXT

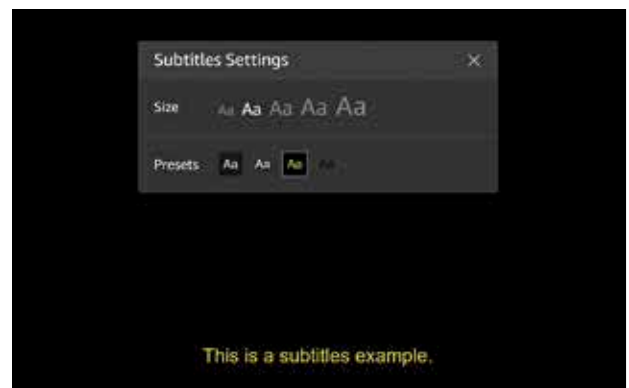

Everyone has their own set of guilty pleasure movies/TV shows they like to sneakily watch when no one's around. However, you certainly wouldn't want your roommate or your friends to know you've been watching it on Prime Video. You also wouldn't want your recom-

gestion will have a hovering X mark on top of it. Simply click X if you want something banished from view.

CUSTOMISE ON-SCREEN SUBTITLES

Subtitles are useful, whether you're having trouble hearing, if you're unfamiliar with an accent or if you simply want to keep the volume down to avoid disturbing others. However, not many streaming services provide users with the ability to tweak the appearance of these subtitles. It turns out, Amazon Prime Video does! You can change the font size, and make some minor visual

Change the size and layout of subtitles

mendations to get tainted with the likes of your guilty pleasure content now, would you? Fear not! You can easily edit your account's watch history on Prime Video. Simply head over to Account and then Settings. Now, navigate to the Watch History tab and you can delete questionable watches by hitting the X next to the name of the show/movie.

On a similar note, you can also edit the Watch Next suggestions displayed on the homepage of your Prime Video account. There's a tiny Edit button on the top right of the Watch Next list. Click on Edit and then each sug-

changes to the subtitles as well, all from a couple of presets. In order to do this, first, click on the subtitles button and then select Subtitles Settings. You can now change how these captions appear on your screen. There's a little dialogue box that lets you adjust the size and colour of text, and also displays a preview of your selected option underneath.

Let us know if any of these tips and tricks helped you out while using Twitch and Amazon Prime Video. Also, do write to us if you think we missed out on any important tricks at editor@digit.in.

JustWatch lets you use search filters to find what you're looking for
