Struggles with a new device
Brands need to move beyond supporting a product, and help buyers use them in tandem with other devices. <https://digit.in/apr20-40>

MEE Audio X10 Truly Wireless Sports

A relatively affordable TWS solution for an active lifestyle

M

EE Audio is known for its affordable audio solutions. The company has now officially entered the cutthroat space of

true wireless earphones with the launch of their newest product, the MEE Audio X10 Truly Wireless Sports Earphones, priced reasonably at ₹4,999. Let's see how they fared in our tests.

Build and design

The packaging of the MEE Audio X10 is quite functional. The box has a flip magnetic cover which unveils certain usage instructions.

Coming to the charging case now, it is a matte-black, rectangular one with rounded corners. It also features four LED indicators on the front and a USB Type C port on the right side. The case is compact and pocket-friendly, weighing a mere 43 gms. However, we found the design to be rather bland, unimaginative even.

When opened, the four LED lights glow as per the battery left in the case. Additionally, the earphones also house white LEDs which can be seen through a translucent area in the buds. The bland aesthetics of the X10's case is seriously heightened when you just open the case, due to the LEDs.

Coming to the earbuds, they feature an oblong shape and dual accents. The earphones also have angled nozzles and slightly conical eartips. The back of the earphones have the physical buttons. The twist-to-fit, ergonomic design of the earphones ensures great passive isolation and comfort.

Features

The MEE Audio X10 featuring Bluetooth v5.0, come with auto power on and connection capabilities. The process of connection is seamless and quick. The earphones also come equipped with USB Type-C charging and are rated

IPX5 water resistant which means it can shrug off sweat or light splashes.

The battery life of the MEE Audio X10 earphones is quite sizable as well.

The earphones are capable of lasting for up to 4.5 hours, while the charging case provides an additional 18.5 hours, making the total 23 hours! This is quite impressive given the small form factor of the charging case as well as the earphones. In our tests, the earphones survived a good 4 hours at 70 percent volume while the charging case topped off the buds another 4-5 times.

The earphones give touch controls a skip (which is understandable at this price point) and go with physical buttons. You can summon your phone's voice assistant using the buttons as well.

Unfortunately, the earphones do not support any extra codecs such as aptX or AAC and they also do not have a dedicated app. Nevertheless, the earphones provide users with a few, essential features that will enhance their experience.

Performance

At first listen, you'll probably be pleased with the sound quality of the MEE Audio X10. However, if you listen attentively, there are actually some shortcomings in the generally warm sound signature the X10 boasts. Featuring 5mm drivers, the bass response is punchy and features quite a bit of enthusiasm, so

hip-hop, rap and EDM tracks sound energetic. However, the bass and lows lack fine details. In *Mindstreet* by *Motherjane*, the bass guitar sounds a muddy and distorted. Also, since the lows are quite a bit exaggerated, the mids do tend to suffer from some auditory masking. This is a shame since the mids are the most well-reproduced frequency on these earphones. Uninterrupted by extra bass and low-frequency instruments, the mids shine. Vocals are also produced quite well, especially male ones. Female ones suffer from a bit too much sibilance in the S and T sounds. The highs are decent but they can get a bit jarring at higher volumes. The cymbals in *Pull Me Under* by *Dream Theatre* sound considerably distorted. Apart from this, the soundstage is decent, but the imaging is surprisingly good. Call quality is not satisfactory though. The voice sounds pretty muffled and the background noises are picked up excessively.

Bottomline

The MEE Audio X10 Truly Wireless earphones are truly built for those who live an active lifestyle owing to their ergonomic design and comfortable fit. However, if you also care about the intricacies of sound, then these earphones may not be a good fit for you. You can go for true wireless earphones from companies such as Noise or you can go for wireless earphones from companies such as Sony, Jays and Shanling.
