Onida 43-inch Full HD Smart TV – Fire TV Edition

A fantastic TV for panel performance and smart capabilities

Price
₹22,000

If you are looking for a TV on a budget of ₹20,000 to ₹25,000 with a

screen size of 43-inches, we have with us the Onida 43-inch Full HD Smart IPS LED TV – Fire TV Edition. It comes with the Fire TV built into it and an Alexa enabled voice remote control.

but it controls everything and brings with it hotkeys for services like Netflix, Prime Videos, and Sony Liv. The remote control is well built, easy to use and anyone that has used a Fire TV stick in the past will feel right at home.

Performance

The Display Panel on the Onida TV Fire Edition is an IPS panel and has a 1080p resolution. The TV does not boast of HDR and honestly, it works well in the TV's favour as the picture quality overall is quite good.

Kicking things off with Altered Carbon, Season 1 Episode 7, the warehouse fight scene is one that has details better than what we have seen on budget HDR TVs. Sure, we have some niggles with the contrast and saturation but changing the preset from Standard to Dynamic helped. Even skin tones looked natural and pretty detailed.

The TV also has a dedicated game mode and switching to this helps reduce input lag a bit. We played a few titles such as Assassin's Creed Odyssey and Forza and they looked pretty decent Overall, the picture quality of the TV is definitely worth considering. It has nice colour saturation, good details

and enough control over the settings to get content to look just the way you like it.

The TV is running on the Fire TV OS and it is almost identical to the UI you get on the Fire TV stick. From the home screen to the settings and even the app store, everything is the same as the Fire TV stick, including the fluidity. The UI barely lagged or hung.

If you want to change the picture or sound settings, there is no menu button on the remote control. You have to long-press the home button and a small menu popup appears which gives you access to picture and sound settings.

The remote is Alexa-enabled. You could press the voice button on the remote control and say things like "Play Stranger Things from Netflix" and the TV will perform the task. You could also say "HDMI 2" and the TV will switch sources. If you have smart home appliances that work with Alexa, then you can control those as well. Overall, the UI is the strongest element of this TV.

The one place the TV lacks is with the audio output from the built-in speakers. It is appalling. Thankfully, the TV supports Bluetooth, so you can connect a Bluetooth speaker. If you have a pair of speakers or a soundbar, you can connect those to the TV via a 3.5mm cable or optical or ARC to get better audio output.

Bottom line

If it weren't for the lacklustre audio performance of the TV, we'd say this is one of the best TVs you can get in the 20k-25k price point. If you can invest in speakers, then yes, for the features, UI and most importantly, the picture quality, this is a damn good TV. It has a smooth, easy to use UI, good picture quality and ample connectivity options.

—Sameer Mitha

Build and Design

The TV looks like any other TV we have seen in this price range. It has a plastic shell and when kept on a table, stands on plastic feet. The feet are outward-facing and hold the TV well in place. The TV is surrounded by black glossy borders. The build is traditional and sturdy and the design would get it lost in the crowd.

Coming to connectivity, the Onida Fire TV Edition has 3 HDMI ports, 1 USB port, Optical, and headphones out on the side. HDMI 1 is ARC enabled. On the back, it has an ethernet port, composite in and antenna port. We would like to see two USB ports at this price point, but since we are not recommending a streaming device like the Fire Stick with this TV, we'll let it slide. The TV supports Bluetooth as well.

The remote control is a treat to use. It is just like the Fire TV remote control,
