

FB, Google to lose billions

The COVID-19 virus is estimated to wipe out over \$44 billion of Facebook and Google's ad revenue. <https://digit.in/apr20-49>

Play Movies may offer free films

Google Play Movies is planning on providing users with hundreds of free movies with ads. <https://digit.in/apr20-50>

iQOO 3 5G

Ticks all the boxes for a heavy user

It's not every day do we see a new smartphone take on the well-settled incumbents in the premium segment, with the latest hardware made available before anyone else, but that's exactly what the iQOO 3 5G did. Let's see how the device fared.

Design and display

The design of the phone is at best, average. But the predictable design doesn't make it any less ergonomic. The rounded corners, and a compact form factor makes it easier to hold and use the phone. But it does carry quite a lot of heft. The iQOO 3 5G's AMOLED display measures 6.44-inch diagonally. The panel is HDR10+ certified and hits 531 lux under direct sunlight.

Camera

The camera setup on the iQOO 3 5G also looks to impress. There's a 48MP quad-camera setup at the back that includes a 13MP ultrawide lens, another 13MP telephoto lens and another 2MP depth sensor. On the front, you get a 16MP sensor in a punch-hole cutout.

The 48MP primary camera does put out sharp details in photos in its native 48MP mode. Yet, with no AI scene recognition applied, the contrast looks unnaturally boosted. Photos taken with pixel-binning turned on come out quite balanced. The dynamic range is also quite impressive. Indoors, the performance is above-average.

The 13MP telephoto lens also carries over the adequate sharpness and details. However, colours come out far too saturated and vibrant. The ultrawide lens on the iQOO 3 5G quickly became a favourite. With a good balance of colours and exposure along with adequate sharpness, this 13MP lens is fun to use.

The 16MP selfie camera does offer a lot of options for shooting selfies. It

managed to keep the background lights under check and also light up the display with a warm tone to illuminate facial details much better.

Performance

The internals consist of a new Snapdragon 865 SoC, along with the latest

LPDDR5 RAM and UFS 3.1 storage and even a carbon-fibre heat sink. On AnTuTu, the iQOO 3 5G scored 585579 while on Geekbench 5 single-core and multi-core tests, it scored 928 and 3289, respectively. On 3DMark Slingshot Extreme which tested the Adreno 650 on the Snapdragon 865, it scored an impressive 7262 in the OpenGL test while the Vulkan test scored 6631. Looking at the numbers, the iQOO 3 5G is clearly leading the pack with the highest benchmarks we have seen this year on an Android smartphone.

Using the iQOO 3 5G, in general, is a smooth experience. The UI operations are fast and slick and there are no lags whatsoever in launching apps. Having said that, the experience could have been better if the iQOO 3 5G came with a high refresh rate display. The iQOO 3 5G comes with two pressure-sensitive "monster buttons", which double up as extra controls for gaming. The buttons are quite functional. They work the well,

only the intensity of the haptic feedback is not consistent. We played COD: Mobile and PUBG Mobile both at their highest possible settings. COD: Mobile delivered 60 FPS with 100% stability while PUBG Mobile ran at 40 FPS with 100% stability.

Battery Life

The iQOO 3 5G has a rather large 4,400mAh battery that gets topped up by a 55W fast charger. Despite a large battery, the screen-on times are rather disappointing. With 4G data turned on, the iQOO 3 5G delivers just about a day's worth of usage with heavy usage that includes an hour of gaming, streaming a 40-minute episode on Netflix and browsing social media. On Wi-Fi, the battery drain is a little less aggressive. The good news is that the 55W charger tops up the battery in 50 minutes.

Bottomline

The iQOO 3 5G is clearly a contender for being one of the best smartphones in the first half of 2020. With impeccable hardware, the iQOO 3 5G ticks all the boxes for a heavy user — excellent gaming capabilities, fast app loading and switching, responsive UI, a compact design and above average cameras. We also don't have a record of how quickly iQOO will push out updates for this device, and for how long, but for it to stay relevant enough for using its 5G features, it should get at least two years of active support. Having said that, since iQOO also launched a 4G only variant of the device that is priced much lower, it's more prudent to invest in the lower priced 4G variant. Either way, you won't be disappointed provided you can look past the invasive push notifications.
