

FIGHT THE PANDEMIC

The global response to fight the novel coronavirus outbreak primarily involves taking every effort possible to reduce transmissions from person to person. Social distancing and meticulous personal hygiene are both important aspects of realising this. The former also ensures that the healthcare system can handle the new cases. Understanding the extent and destruction caused by the pandemic can be daunting, but the essential takeaway is this – panicking is not going to help, and thoughtless actions can actually be counterproductive.

DISTRIBUTION OF COVID-19 CASES AS OF 20 MARCH 2020.

USE YOUR PC TO HELP

One of the ways in which you can help with the ongoing pandemic is to use excess PC resources towards distributing computing projects. These projects investigate the structure of proteins, to find possible therapies and treatments. The software are resource intensive and will slow down the computer. The Folding@Home project has categorised the coronavirus specific research under the "Any" category. You will need to choose that category in the web client, and dedicate a certain amount of resources, as well as schedule the folding. Remember to bookmark the web client, as you need it to stop the folding. The BOINC software can be used to run the Rosetta@Home project, which also contributes towards research for finding coronavirus cures. There is also an android client available. Detailed instructions are here: <https://digit.in/coronago>

MASK WEARING GUIDELINES

- Sanitise your hand with soap before handling the mask, if soap is not available hand sanitiser will do
- Touch only the straps of the mask while wearing. Tighten the bands and mould the stiff edge of the nosepiece around the contour of your nose.
- While wearing the mask, remember not to handle the front of the mask with your hands.
- While removing the mask, handle it only with the bands.
- Dispose the mask by turning it inside out.
- Remember to thoroughly wash your hands after disposing of the mask as well. Soap takes 20 seconds of washing to disintegrate viruses.
- Do not purchase the cheap mask from street vendors or stalls outside railway stations, they may be selling washed reused masks. Buy from a medical shop.
