

Pokémon Go from home

In addition to making it easier to play from home, Niantic has also further discounted items in Pknn GO. <https://digit.in/apr20-13>

1 million face masks for NA

The FCA will reportedly make 1 million face masks for North America to fight COVID-19. <https://digit.in/apr20-14>

Advancements in imaging techniques, combined with creative ways of batch processing are uncovering never before seen tiny details on common subjects, revealing that there is another world.

Credit: Charis Sinclair

↑ Photographer Charis Sinclair captured this close up of a cactus while travelling through Ecuador. The capture is an effort to give the impression of an alien landscape.

Credit: Chris Perani

← Chris Perani uses a 10x microscope attached to a 200mm lens to capture these images of butterfly wings, which results in an extremely narrow depth of field. 2,100 images have to be combined together for a single photo with all the hairs in focus

Credit: Pyanek

← Pyanek captures photos of everyday objects using a technique called reverse lens macro photography, which can damage the lens. Shown here is a incense stick.

Credit: USGS

← The USGS Native Bee Inventory and Monitoring Program documents the bees that they work with in exquisite detail on their Flickr album. Shown here is the Hoplitid fulgida.

Credit: Dr Annita Achilleos

← This image of a mouse embryo was captured using a technique called confocal microscopy, where a series of tiny optical splices are stacked using a computer.

Credit: Peter Sabol

← The wings of these mayflies catch the sun in this capture. The photographer, Peter Sabol won the International Garden Photographer of the Year in 2018 for this image.

Credit: Wim van Egmond

← Diatoms are algae that come in various sizes and shapes, and are fascinating subjects for Macro photography. Shown here is Triceratium sp, captured by Wim van Egmond.
