

Facebook struggles with traffic

Facebook is struggling to handle the upsurge of traffic on the site since people began staying home. <https://digit.in/apr20-15>

India's air quality improves

India's air quality saw immediate improvement after PM Modi's issued 21 day lockdown. <https://digit.in/apr20-16>

↑ The Nikon Small World Macro photography contest is a catalogue of some amazing captures every year. Here is the 9th place winner in 2018, showing a security hologram.

Credit: Dr Harris Antonopoulos

↑ Brightfield macro photography involves simply bouncing light off or passing them through the subjects. Shown here are stink bug eggs captured using the technique.

← This image captured by the Dartmouth College Electron Microscope Facility shows the pollen grains of a variety of plants.

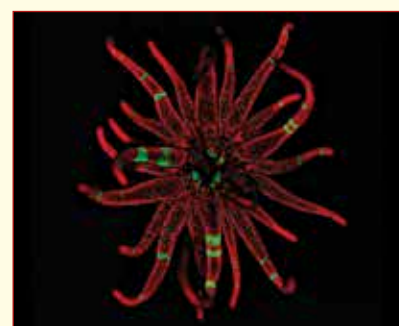

← Dark field microscopy makes transparent samples scatter the light, instead of passing it through them, producing stunning images in high contrast. Shown here is *Stephanoceros fimbriatus*.

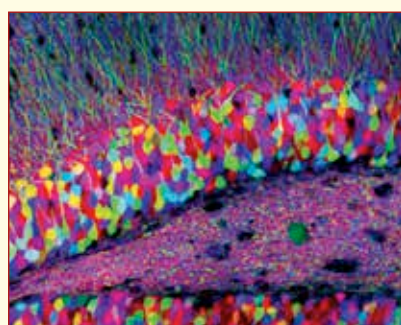

Credit: Tom Wagner

← This is just a thin wafer of water ice placed between two polarising filters, captured using a 100 mm Pentax macro lens. The streaks are air bubbles that did not escape the freezing ice.

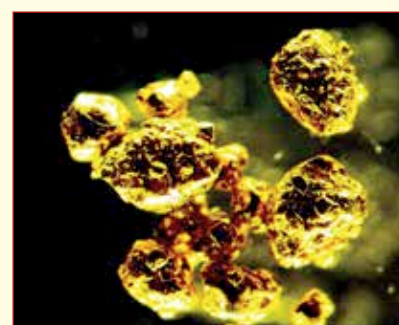

Credit: Christian Renicke

← A sea anemone (*Exaiptasia pallida*) polyp with blurry parts of the image removed using a technique called deconvolution microscopy. The green fluorescence is natural.

Credit: J Lichtman

← Harvard researchers get a peek into the working of brains in living animals by transferring red, green and cyan bioluminescent proteins from jellyfish into mice, producing a "brainbow".
